The Inspirational Untold Stories of Secondary Mathematics Teachers Alice F. Artzt, Frances R. Curcio, 2020-08-01 Personal story telling is a powerful and interesting medium through which one can share experiences insights successes and difficulties in meaningful contexts Teaching in general and mathematics teaching in particular is much more than what meets the eye Most people have only experienced teaching from the vantage point of a student and have impressions of teachers and teaching that are simplistic and usually totally incorrect The lives of mathematics teachers are varied and contrary to what one might think they are The journeys of exemplary in service teachers are not linear there are many bends potholes and detours through which they have navigated The road conditions of teaching are fodder for the 12 untold stories collected in this

volume whose authors graduated from a special four year undergraduate mathematics teacher preparation program containing innovative components many of which are revealed through the experiences described in their stories The range of narratives vary in every possible way from the reasons they became mathematics teachers to the number of years teaching to the experiences encountered while teaching to the different roles they have assumed throughout their careers Nevertheless one strand permeates all of the stories their passion for what they do and their ability to reflect on early college experiences that contribute to their performance These inspiring narratives will shed light on the developmental processes of mathematics teachers what it means to teach mathematics and the components of a secondary mathematics teacher preparation program that can contribute to their expertise Praise for The Inspirational Untold Stories of Secondary Mathematics Teachers This lovely book contains personal stories about the process of becoming a mathematics teacher and the challenges and rewards of the early years of teaching These stories highlight that the path to teaching is often indirect rocky and filled with doubts But these poignant stories are powerful because they are so honest I wish I d read these stories before I experienced some of the joys and challenges of my early years of teaching because they would have prepared me for the roller coaster of emotion associated with entering this complex but beautiful profession I think these stories will be helpful when working with prospective and early career teachers Randolph Philipp Professor of Mathematics Education School of Teacher Education San Diego State University Immediate Past President Association of Mathematics Teacher Educators AMTE This is a book about real people and true stories the narratives are really insightful and truly inspirational It is not only a book that those involved in teacher preparation programs may find useful and informative to read but also a book that could provide insights and inspiration to those who are exploring what it is like to be a teacher The journey of each of these success stories despite the diverse starting point of each speaks volumes of the importance of an effective teacher preparation program that not only nurtures but also provides support for the growth of the preservice teachers The narratives in this book are certainly a testimonial to what we often hear Teachers are more often made than born Ngan Hoe Lee Associate Professor Mathematics Mathematics Education National Institute of Education Singapore

In recent years it has become increasingly clear that there are important connections relating three concepts groupoids inverse semigroups and operator algebras There has been a great deal of progress in this area over the last two decades and this book gives a careful up to date and reasonably extensive account of the subject matter After an introductory first chapter the second chapter presents a self contained account of inverse semigroups locally compact and r discrete groupoids and Lie groupoids The section on Lie groupoids in chapter 2 contains a detailed discussion of groupoids particularly important in noncommutative geometry including the holonomy groupoids of a foliated manifold and the tangent groupoid of a manifold The representation theories of locally compact and r discrete groupoids are developed in the third chapter and it is shown that the C algebras of r discrete groupoids are the covariance C algebras for inverse semigroup actions on locally compact Hausdorff spaces A final chapter associates a universal r discrete groupoid with any inverse semigroup Six subsequent appendices treat topics related to those covered in the text The book should appeal to a wide variety of professional

mathematicians and graduate students in fields such as operator algebras analysis on groupoids semigroup theory and noncommutative geometry It will also be of interest to mathematicians interested in tilings and theoretical physicists whose focus is modeling quasicrystals with tilings An effort has been made to make the book lucid and user friendly thus it should be accessible to any reader with a basic background in measure theory and functional analysis
