The Geometry of an Art Kirsti Andersen, 2008-11-23 Key Issues ver since the late 1970s when Pia Holdt a student of mine at the time and Jed Buchwald a colleague normally working in another field made E me aware of how fascinating the history of perspective constructions is I have wanted to know more My studies have resulted in the present book in which I am mainly concerned with describing how the understanding of the geometry behind perspective developed and how and to what extent new insights within the mathematical theory of perspective influenced the way the discipline was presented in textbooks In order to throw light on these aspects of the history of perspective I have chosen to focus upon a number of key questions that I have divided into two groups Questions Concerning the History of Geometrical Perspective How did geometrical constructions of perspective images emerge How were they understood mathematically How did the geometrical constructions give rise to a mathematical theory of perspective How did this theory

evolve Inconnectionwith the last question it is natural to take up the following themes Pixels & Paintings David G. Stork, 2023-11-14 PIXELS PAINTINGS The discussion is firmly grounded in established art historical practices such as close visual analysis and an understanding of artists working methods and real world examples demonstrate how computer assisted techniques can complement traditional approaches Dr Emilie Gordenker Director of the Van Gogh Museum The pioneering presentation of computer based image analysis of fine art forging a dialog between art scholars and the computer vision community In recent years sophisticated computer vision graphics and artificial intelligence algorithms have proven to be increasingly powerful tools in the study of fine art These methods some adapted from forensic digital photography and others developed specifically for art empower a growing number of computer savvy art scholars conservators and historians to answer longstanding questions as well as provide new approaches to the interpretation of art Pixels Paintings provides the first and authoritative overview of the broad range of these methods which extend from image processing of palette marks brush strokes and shapes up through analysis of objects poses style composition to the computation of simple interpretations of artworks This book stresses that computer methods for art analysis must always incorporate the cultural contexts appropriate to the art studies at hand a blend of humanistic and scientific expertise Describes powerful computer image analysis methods and their application to problems in the history and interpretation of fine art Discusses some of the art historical lessons and revelations provided by the use of these methods Clarifies the assumptions and applicability of methods and the role of cultural contexts in their use Shows how computation can be used to analyze tens of thousands of artworks to reveal trends and anomalies that could not be found by traditional non computer methods Pixels Paintings is essential reading for computer image analysts and graphics specialists conservators historians students psychologists and the general public interested in the study and appreciation of art Design Strategies for Reimagining the City Linda Matthews, 2022-06-24 Design Strategies for Reimagining the City is situated between projective geometry optical science and architectural design It draws together seemingly unrelated fields in a series of new digital design tools and techniques underpinned by tested prototypes The book reveals how the relationship between architectural design and the ubiquitous urban camera can be used to question established structures of control and ownership inherent within the visual model of the Western canon Using key moments from the broad trajectory of historical and contemporary representational mechanisms and techniques it describes the image s impact on city form from the inception of linear perspective geometry to the digital turn The discussion draws upon combined fields of digital geometry the pictorial adaptation of human optical cues of colour brightness and shape and modern image capture technology webcams mobile phones and UAVs to demonstrate how the permeation of contemporary urban space by digital networks calls for new architectural design tools and techniques A series of speculative drawings and architectural interventions that apply the new design tools and techniques complete the book Aimed at researchers academics and upper level students in digital design and theory it makes a timely contribution to the

ongoing and broadly debated relationship between representation and architecture

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas
