

ORGAN SYSTEMS

The human body is either studied by regions or by organ systems. This book uses the organ system approach in which individual organs (such as bones) are grouped into the larger organ systems (for example, the skeletal system). Typically eleven organ systems are described. The **skeletal system** consists of all of the bones of the body. Examples are the femur and the humerus. The **nervous system** consists of the nerves, spinal cord, and brain while the **lymphatic system** consists of lymph glands, conducting tubes called **lymphatics**, and organs such as the **spleen**. The term *immune system* is more of a functional classification

and will not be treated as a separate system here. The **muscular system** consists of individual skeletal muscles as organs such as the **pectoralis major** and **deltoid**. Label the organ systems underneath each illustration and label the selected organs by using the terms available. When you finish, select different colors for each organ system and color them in.

Organ System	Organ	Organ	Organ

Page 4 de la couv. Wisdom of the Body Moving Linda Hartley, 1995-10-17. This comprehensive guide introduces Body Mind Centering, the internationally recognized field pioneered by dancer and occupational therapist Bonnie Bainbridge Cohen. Devoting thirty five years to a systematic investigation of the relations between bodily experience and the anatomical maps of science, Bainbridge Cohen independently discovered many of the principles that underlie Feldenkrais work, cranial osteopathy, Rolfing, dance therapy and Zero Balancing. Experienced BMC practitioner Linda Hartley demonstrates the basic philosophy and key elements of Body Mind Centering. Drawing on animal and infant movements, she takes readers through the wondrous realms of Bainbridge Cohen's pantheon from the minds of the skeletal and muscular systems to the quite different inner lives of digestive, lymphatic, urinary, respiratory, vocal, circulatory, endocrine and reproductive organs. Her choreography ultimately brings us into the states of consciousness of skins, cells, blood, fat, cerebrospinal fluid, nervous system and brain. Hartley's explorations of the images, feelings, sensations and intuitions of the diverse organs and cells lead to exercises that gently guide students in ways of discovering and integrating their bodies' multidimensional aspects.
