0625/02

0625 PHYSICS
Paper 2 (Core Theory), maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2008 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Flavor Physics and the TeV Scale George W. S. Hou, 2009-06-10 The avor sector carries the largest number of parameters in the Standard Model of particle physics With no evident symmetry principle behind its existence it is not as well understood as the SU 3 SU 2 U 1 gauge interactions Yet it tends to be underrated sometimes even ignored by the erudite This is especially so on the verge of the LHC era where the exploration of the physics of electroweak symmetry breaking at the high energy frontier would soon be the main thrust of the field Yet the question of Who ordered the muon by I I Rabi lingers We do not understand why there is family or generation replication That three generations are needed to have CP violation is a partial answer We do not understand why there are only three generations but Nature insists on just about only three active neutrinos But then the CP violation with three generations fall far short of what is needed to generate the baryon asymmetry of the Universe We do not understand why most fermions are

so light on the weak symmetry breaking scale $v_e v$ yet the third generation top quark is a $v_e v$ scale particle We do not understand why quarks and leptons look so different in particular why neutrinos are rather close to being massless but then have at least two near maximal mixing angles We shall not however concern ourselves with the neutrino sector It has a life of its own
