Kumar, Amit Pal, Surendra Singh Kachhwaha, Prashant Kumar Jain, 2021-05-25 This book presents the select proceedings of the second International Conference on Recent Advances in Mechanical Engineering RAME 2020. The topics covered include aerodynamics and fluid mechanics, automation, automotive engineering, composites, ceramics and polymers, processing, computational mechanics, failure and fracture mechanics, friction, tribology and surface engineering, heating and ventilation, air conditioning system, industrial engineering, IC engines, turbomachinery and alternative fuels, machinability and formability of materials, mechanisms and machines, metrology and computer aided inspection, micro and nano mechanics, modelling, simulation and optimization, product design and development, rapid manufacturing technologies and prototyping, solid mechanics and structural mechanics, thermodynamics and heat transfer, traditional and non traditional machining processes, vibration and acoustics. The book also discusses various energy efficient renewable and non renewable resources and technologies, strategies and technologies for sustainable development and energy environmental interaction. The book is a valuable reference for beginners, researchers and professionals interested in sustainable construction and allied fields.

Smart Electric and Hybrid Vehicles Ajay Kumar, D. K. Rajak, Parveen Kumar, Sarita Rathee, 2024-08-14 This book presents an analysis of the existing surveys in the literature of batteries, chargers, control systems, battery management systems, plugs, sockets, drives and fuel cell based and plug in smart electric and hybrid vehicles. It provides detailed comparative analysis of parameters of intelligent electric and hybrid vehicles with conventional vehicles and in depth knowledge of power electronics tools in smart electric and hybrid vehicles. This book compiles the research work and findings in advancements of smart electric and hybrid vehicles from automobile, mechanical, electronic, electrical, computer science and allied engineering domains and explains how smart electric and hybrid vehicles can be utilized without harmful emissions over the entire lifecycle of a vehicle and how reliance on fossil fuels can be reduced. Features: Discusses different types of lightweight and robust materials for the fabrication of smart electric and hybrid vehicles. Presents computational models, emerging technologies, numerical techniques and environmental and economic benefits applicable to electric vehicles. Highlights the applications of smart and hybrid vehicles in diverse sectors including aerospace, agriculture, defense and medical. Covers electromechanical drives, storage systems, wireless charging and component design for smart electric and hybrid vehicles. Showcases a detailed comparative analysis of parameters of intelligent electric and hybrid vehicles with conventional vehicles. It is primarily written for senior undergraduates, graduate students and academic researchers in the fields of electrical engineering, electrical and electronics engineering, computer engineering and automotive engineering. SCIENCE PROJECTS IN RENEWABLE ENERGY AND ENERGY EFFICIENCY , The Value of Science Projects Science projects are an especially effective way of teaching students about the world around them Whether conducted in the classroom or for a science fair science projects can help develop critical thinking and problem

solving skills In a classroom setting science projects offer a way for teachers to put action into the lessons The students have fun while they re learning important knowledge and skills And the teacher often learns with the students experiencing excitement with each new discovery Science projects are generally of two types non experimental and experimental Non experimental projects usually reflect what the student has read or heard about in an area of science By creating displays or collections of scientific information or demonstrating certain natural phenomena the student goes through a process similar to a library research report or a meta analysis in any other subject Projects of this type may be appropriate for some students at a very early level but they usually do not provide the experiences that develop problem solving skills related to the scientific process On the other hand experimental projects pose a question or hypothesis which is then answered by doing an experiment or by modeling a phenomenon The question doesn t have to be something never before answered by scientist that is not necessary to conduct original research The process of picking a topic designing an experiment and recording and analyzing data is what s important
