FAMOUS LIGHT-WEIGHT SINGLES for AUXILIARY SERVICE

The little engine is readily attached to a small sailing boat

IN these days when all cruising yachts are fitted with auxiliary power as a matter of course it is not surprising to find that even in the case of the open day boat, or knockabout, there is a movement in the same direction.

With the growth of week-end cruising time has become an important factor in our calculations. To be able to sail any distance and to be sure of getting back to our mooring according to programme we cannot depend on sail alone. We must be able to turn on the engine if wind and tide are against us.

Now in the case of the small knockabout there is much to be said for the employment of an outboard motor for auxiliary power since not only does it take up no valuable space, but being detachable it does not impair the sailing qualities of the boat. It can be stowed or left tilted when not in use.

It is largely with a view to catering for this type of craft that the British Seagull has been developed. This 3 h.p. outboard has remained basically unchanged for several years, for the manufacturers have concentrated on producing a high-quality dependable unit of sufficient power to meet this service.

A particularly interesting feature of

this unit is the addition of a special bracket which can replace that normally found on outboards. As illustrated here this bracket can be readily adapted to different hulls and allows of the engine being unshipped without disturbing the mounting. Alternatively the normal fitting permits of the engine being tilted clear of the water.

Developing 3½ to 4 h.p. and weighing 34 lbs., the British Seagull is essentially a heavy-duty service engine of robust construction and high quality. It is available

with or without a clutch—a thoroughly tested and simple positive dog-type mechanism of great value when moving in a crowded anchorage.

For Auxiliary Service

In order to suit craft of up to 4 tons the engine is designed to swing a larger propeller than is usually found on small outboards. A large water-cooled silencer is fitted to ensure reasonable quietness under full load.

Great care has been taken to ensure freedom from petty troubles, while particular attention has to be paid to starting and control. The carburettor is easy to adjust, and as it is situated before the crankcase the chance of difficult starting due to crankcase flooding is eliminated. Fuel consumption at normal speed is about 2½ hours for a gallon.

Further details may be obtained from the British Seagull Co., Ltd., Seagull House, Hamilton Road, Hamworthy, Poole, Dorset.
