Vehicle Compatibility in Automotive Crashes Stanley H Backaitis, 2005-03-29 For years reducing the number of traffic related fatalities and injuries has been a major problem throughout the world Today it has gained much more momentum in view of rapidly increasing SUV van and light truck populations relative to the number of passenger cars and due to significant improvements in technologies that facilitate a better understanding of the interaction dynamics among widely differing size vehicles Unless disparities in crashworthiness among vehicles of different masses sizes and structural characteristics in mixed crash environments are successfully taken into account the challenge toward improved vehicle safety will continue This two part compendium provides the most comprehensive information available on the entire spectrum of vehicle crash compatibility The first part presents oral comments captured from the 2003 SAE World Congress panel discussion on compatibility The panel of leading experts representing industry academia and government provides a rough framework and a broad range of views on current and emerging developments in compatibility research The second part of this compendium features 44 best technical papers from SAE International and the International Technical Conference on the Enhanced Safety of Vehicles published from the early 1970s through 2004 Readers will get a feel for the direction passenger car and heavy vehicle manufacturers research institutions infrastructure suppliers insurers and governments are taking to reduce the number of traffic fatalities and injuries

Concrete Structures Subjected to Impact and Blast Loadings and Their Combinations Chunwei

Zhang,Gholamreza Gholipour,2022-05-08 Although much research focuses on investigating the responses of reinforced concrete RC structures under sole impact or blast loads the responses of RC structures under a combination of impact and blast loads currently represent a gap in our knowledge The combined actions of impact and blast loadings may be applied to

RC structures during accidental or intentional collision of vessels vehicles etc carrying explosive materials A comprehensive study on the vulnerability of various structural members is carried out using finite element FE simulations under combination of impact and blast loads with the variations of various loading and structural related parameters and key parameters This book introduces various structural analysis approaches for concrete structures when subjected to extreme loads such as impact and blast loadings The theory of the combinations of impact and blast loads is proposed that can provide primary insights to the specific readers to develop new ideas in impact and blast engineering including combined actions of extreme loads arising from real world intentional or accidental events This book will be of value to students undergraduate or postgraduate engineers and researchers in structural and civil engineering and specifically those who are studying and investigating the performances of concrete structures under extreme loads
