Developing and Validating Test Items Thomas M. Haladyna, Michael C. Rodriguez, 2013-07-18 Since test items are the building blocks of any test learning how to develop and validate test items has always been critical to the teaching learning process As they grow in importance and use testing programs increasingly supplement the use of selected response multiple choice items with constructed response formats This trend is expected to continue As a result a new item writing book is needed one that provides comprehensive coverage of both types of items and of the validity theory underlying them This book is an outgrowth of the author's previous book Developing and Validating Multiple Choice Test Items 3e Haladyna 2004 That book achieved distinction as the leading source of guidance on creating and validating selected response test items Like its predecessor the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field It is very timely in this era of burgeoning testing programs especially when these items are delivered in a computer based environment Key features include Comprehensive and Flexible No other book so thoroughly covers the field of test item development and its various applications Focus on Validity Validity the most important consideration in testing is stressed throughout and is based on the Standards for Educational and Psychological Testing currently under revision by AERA APA and NCME Illustrative Examples The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items Strategies for training item writers and developing large numbers of items using algorithms and other item generating methods are also presented Based on Theory and Research A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors

champion model

Section 2 Data Processing

This part of the book focuses on essential data manipulation and preparation techniques within a Spark environment. It covers computing summary statistics on a Spark DataFrame using summary or dbutils data summaries and methods for outlier removal based on standard deviation or IQR. Emphasis is placed on creating visualizations for both categorical and continuous features and comparing feature types using appropriate methods. The book provides a comprehensive understanding of imputing missing values with mode, mean, or median and the practical application of one-hot encoding for categorical features, including identifying appropriate scenarios for its use. It also discusses the relevance and application of log scale transformation.

Section 3 Model Development

This section guides the reader through the intricacies of model building. It covers selecting appropriate algorithms based on ML foundations for given scenarios and methods to mitigate data imbalance in training data. The book differentiates between estimators and transformers and provides guidance on developing robust training pipelines. Hyperparameter tuning is a key focus, detailing the use of Hyperopt's fmin operation and exploring random grid or Bayesian search methods. It also addresses parallelizing single node models for hyperparameter tuning. The benefits and downsides of cross validation versus train validation splits are discussed, along with practical application of cross validation in model fitting and understanding the number of models trained during grid search and cross validation. The book extensively covers common classification metrics (F1, Log Loss, ROC AUC) and regression metrics (RMSE, MAE, R squared), guiding the reader in choosing the most appropriate metric for specific objectives. Finally, it addresses the need to exponentiate log transformed variables before evaluation and interpreting predictions, and assessing the impact of model complexity and the bias-variance tradeoff on model performance.

Section 4 Model Deployment

The final section of the book is dedicated to deploying machine learning models. It differentiates between and highlights the advantages of various model serving approaches: batch, real-time, and streaming. Practical steps for deploying a custom model to a model endpoint are provided. The book covers using pandas for performing batch inference and explains how streaming inference is achieved with Delta Live Tables. It also details deploying and querying a model for real-time inference and splitting data between endpoints for real-time inference.

Karl Pearson Theodore M. Porter,2004 Theodore Porter s portrait of Pearson extends from religious crisis and sexual tensions to metaphysical and even mathematical anxieties Pearson sought to reconcile reason with enthusiasm and to achieve the impersonal perspective of science without sacrificing complex individuality Even as he longed to experience nature directly and intimately he identified science with renunciation and positivistic detachment Porter finds a turning point in Pearson s career where his humanistic interests gave way to statistical ones in his Grammar of Science 1892 in which he attempted to establish scientific method as the moral educational basis for a refashioned culture BOOK JACKET
