Biber carries out a principled comparison of both synchronic and diachronic patterns of variation across the four languages. Striking similarities as well as differences emerge allowing Biber to predict for the first time cross linguistic universals of register variation. This major new work will provide the foundation for the further investigation of cross linguistic universals governing the pattern of discourse variation across registers and will be of wide interest to any scholar interested in style register and literacy.

Excellence in College Teaching and Learning George Henderson, Susan Smith Nash, 2007. This book will improve the quality of instruction that college students need. It makes numerous suggestions that must be tended to when teachers instruct students. For example, the authors speculate about ways teachers can present what may at times seem to be a mountain of information without burying students under it; why teachers must continually update their Internet skills; and whether courses are taught on campus or online they should not be academic fluff or pedagogical gimmicks. Throughout the book, the authors punctuate sentences and paragraphs with metaphors, similes, hyperboles, and ironies in order to adequately capture a panoramic view of the consonance and dissonance that characterizes effective and ineffective teaching. Scattered throughout the book are suggestions about ways teachers can become more responsive to students. For example, it provides suggestions on how classroom and online teachers can consciously manage sounds, movements, colors, and the other aspects of teaching as though they were like drama, music, ballet, or literature in order to keep students attentive. This is one of the few books that give equal attention to teaching classroom and online courses. Face to face teaching is more art than science, so the first part of the book is interpersonally expansive. Online teaching is more technology and science than art. Therefore, the second part of the book is more straightforward, less interpersonal. By reading this book, teachers will find out what will work for him or her, and it provides a lot of interesting information about other teachers, including the authors. Also provided are succinct overviews of several instructional methods, including their theoretical foundations that can be used independently or together to enhance the education of college students. Many of the topics discussed in one chapter are revisited in later ones. This spiral approach to learning is actually repetition and supplementation for knowledge transfer. The exercises at the end of each chapter serve dual purposes: they are both self-assessments and summaries of selected data. The book will serve as an excellent resource for would-be new and experienced teachers as well as professional development staff and librarians.

Teaching at Its Best Linda B. Nilson, 2016-07-18. The classic teaching toolbox updated with new research and ideas. Mintzes,Emily M. Walter,2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing

knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for **Teacher's Directory of Reading Skill Aids and Materials** Emerald V.
