P. Sreedharan, 1961 The domains of analyticity of solutions of the equation $\Delta u + k^2 u = 0$ in two independent variables are studied with a view to solving boundary value problems in the large The boundary value problems are transformed into function theoretic problems Specifically the Sommerfeld half plane problem for $\Delta u + K^2 u = 0$ is solved A related result on integral equations is obtained Green's functions for a wedge with various boundary conditions are constructed in the case of the equation $\Delta u + k^2 u = 0$ Author *The British National Bibliography* Arthur James Wells, 1968

Handbook of Exact Solutions to Mathematical Equations Andrei D. Polyanin, 2024-08-26 This reference book describes the exact solutions of the following types of mathematical equations Algebraic and Transcendental Equations Ordinary Differential Equations Systems of Ordinary Differential Equations First Order Partial Differential Equations Linear Equations and Problems of Mathematical Physics Nonlinear Equations of Mathematical Physics Systems of Partial Differential Equations Integral Equations Difference and Functional Equations Ordinary Functional Differential Equations Partial Functional Differential Equations The book delves into equations that find practical applications in a wide array of natural and engineering sciences including the theory of heat and mass transfer wave theory hydrodynamics gas dynamics combustion theory elasticity theory general mechanics theoretical physics nonlinear optics biology chemical engineering sciences ecology and more Most of these equations are of a reasonably general form and dependent on free parameters or arbitrary functions The Handbook of Exact Solutions to Mathematical Equations generally has no analogs in world literature and contains a vast amount of new material The exact solutions given in the book being rigorous mathematical standards can be used as test problems to assess the accuracy and verify the adequacy of various numerical and approximate analytical methods for solving mathematical equations as well as to check and compare the effectiveness of exact analytical methods

Real Solutions to Equations from Geometry Frank Sottile, 2011-08-31 Understanding finding or even deciding on the existence of real solutions to a system of equations is a difficult problem with many applications outside of mathematics While it is hopeless to expect much in general we know a surprising amount about these questions for systems which possess additional structure often coming from geometry This book focuses on equations from toric varieties and Grassmannians Not only is much known about these but such equations are common in applications There are three main themes upper bounds on the number of real solutions lower bounds on the number of real solutions and geometric problems that can have all solutions be real The book begins with an overview giving background on real solutions to univariate polynomials and the

geometry of sparse polynomial systems The first half of the book concludes with fewnomial upper bounds and with lower bounds to sparse polynomial systems The second half of the book begins by sampling some geometric problems for which all solutions can be real before devoting the last five chapters to the Shapiro Conjecture in which the relevant polynomial systems have only real solutions
