

# Probability

## Expressions of probability

Probability deals with the theory of chance, and is a measure of the chance or likelihood that something will happen.

Let us illustrate this by the following example:

**Problem:** A spinner has four equal sectors coloured yellow, blue, red and green. What is the probability of landing on blue after spinning the spinner once?

**Solution:** The chances of landing on blue are 1 in 4, or one fourth. Therefore, the probability of landing on blue is one fourth, which we can also write as  $\frac{1}{4}$ , 0.25 or 25%.

Here are some definitions and examples from the problem above.

| Definition                                                                                                 | Example                                                                                                                                     |
|------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| An <b>experiment</b> is a situation involving chance or probability that leads to results called outcomes. | In the problem above, the experiment is spinning the spinner. Other examples are: flipping a coin, or rolling a dice.                       |
| An <b>outcome</b> is the result of a single trial of an experiment, such as spinning the spinner once.     | The possible outcomes are landing on yellow, blue, green or red. In the problem above, we were interested in the "landing on blue" outcome. |
| An <b>event</b> is one or more outcomes of an experiment.                                                  | One event of this experiment is landing on blue.                                                                                            |
| <b>Probability</b> is the measure of how likely an event is.                                               | The probability of landing on blue is one fourth (that is, $\frac{1}{4}$ , 0.25 or 25%).                                                    |
