NWEA FAQ Northwest Evaluation Association,2015 Northwest Evaluation Association NWEA conducts norming studies every several years to provide the best and most up to date information we can about student achievement and growth to better support educational decision making It is an important part of our commitment to our partners The most recent NWEA norms were released in July 2015 Just as we expect student performance to change with time norms of student performance will change correspondingly For 2015 several factors may have influenced how the US school age population performed on Measures of Academic Progress MAP assessments of language usage mathematics and reading over the 2011 12 2012 13 and 2013 14 school years Prominent among these possible factors are the introduction of Common Core instruction and Common Core versions of MAP But as with all empirical studies changes in scope and data necessitated changes in statistical design and analyses The methodological improvements introduced in the 2015 norms have resulted in a set of norms that are more representative of the US school age population than previous NWEA norms Methodological changes involved differences in the way post stratification weights were developed and the way growth was modeled Details of these changes are addressed more thoroughly in the 2015 Norms Study As a result of the improved methodology partners can expect some differences from previous norms as explained below

2015 NWEA Measures of Academic Progress Normative Data Northwest Evaluation Association,2015 By using carefully constructed measurement scales that span grades Measures of Academic Progress MAP interim assessments from Northwest Evaluation Association NWEA offer educators efficient and very accurate estimates of student achievement status within a subject Before achievement test scores can be useful to educators however they need to be evaluated within a context The RIT Scale is a curriculum scale that uses individual item difficulty values to estimate student achievement An advantage of the RIT scale is that it can relate the numbers on the scale directly to the difficulty of items on the tests In addition the RIT scale is an equal interval scale Equal interval means that the difference between scores is the same regardless of whether a student is at the top bottom or middle of the RIT scale and it has the same meaning regardless of grade level To that end 2015 RIT Scale Norms allow educators to compare achievement status and changes in achievement status growth between test occasions to students performance in the same grade at a comparable stage of the school year This contextualizing of student performance 1 helps teachers as they plan instruction for individual students or confer with parents 2 supports school and district administrators as they focus on allocating resources and 3 empowers school staff as they work to improve all educational outcomes The 2015 NWEA RIT Scale Norms Study provides status and growth norms for individual students as well as for schools on each of the four RIT scales Reading Language Usage Mathematics and General Science The study s

results are based on K 11 grade level samples Each sample is comprised of 72 000 to 153 000 student test records from approximately 1000 schools These numbers vary by subject These samples were drawn randomly from test record pools of up to 10 2 million students attending more than 23 500 public schools spread across 6 000 districts in 49 states Rigorous procedures were used to ensure that the norms were representative of the U S school age population Since MAP assessments can be administered on a schedule designed to meet a school s needs tests can be administered at any time during the school year The 2015 norms adjust for this scheduling flexibility by accounting for instructional days allowing more valid comparisons for status and growth *2011 Normative Data* Northwest Evaluation Association,2017 Having the right data is a key component of individualizing instruction for each child The Northwest Evaluation Association NWEA has the ability to measure a student s achievement and academic growth independent of grade across time From the insight provided with Measures of Academic Progress MAP and its reports educators can compare class or grade level performance to students from a wide variety of schools across the country Status norms provide a starting point for educators to review data and help them gain an understanding of each child s current academic level where they need focused instruction and the extent of their progress The 2011 NWEA RIT Scale Norms Study provides growth and status norms for all five RIT scales Reading Language Usage Mathematics General Science and Science Concepts and Processes **A Study of the Ongoing Alignment of the NWEA RIT Scale with the Arizona Instrument to Measure Standards (AIMS)** John Cronin,Branin Bowe,2005 Each spring Arizona students participate in testing as part of the state s assessment program Elementary and middle school students in grades 3 through 8 take the Arizona Instrument to Measure Standards Dual Purpose Assessment AIMS DPA in reading writing and mathematics These tests serve as an important measure of student achievement for the state s accountability system Results from these assessments are used to make state level decisions concerning education to meet Adequate Yearly Progress AYP reporting requirements of the No Child Left Behind Act NCLB calculate status and improvement indicators for AZ LEARNS the state accountability system and to inform schools and school districts of their performance The Arizona Department of Education has developed scales that are used to assign students to one of four performance levels on these tests Many students who attend school in Arizona also take tests developed in cooperation with the Northwest Evaluation Association NWEA The content of these tests are aligned with the Arizona standards and they report student performance on a single cross grade scale which NWEA calls the RIT scale This study investigated the relationship between the scales used for the AIMS assessments and the RIT scales used to report performance on Northwest Evaluation Association tests The study estimated the changes in reading and mathematics RIT score equivalents for the AIMS performance levels in those subjects Test records for more than 20 000 students were included in this study The information gathered in this study came from measures employing the NWEA RIT Scale Because all of the research that we have to date indicates that scores generated from computer based tests and Achievement Level Test ALT scores are virtually

interchangeable readers should feel comfortable applying the results of this study in any setting that uses the RIT scale

Aligning the NWEA RIT Scale with the Nevada Criterion Referenced Assessment and the Iowa Test of Basic Skills John Cronin, Branin Bowe, 2004 Each year Nevada students in grades 3 4 5 and 7 participate in testing as part of the Nevada assessment program Students in grades 3 and 5 take the Nevada Criterion Referenced Assessment Nevada CRT while students in grades 4 and 7 take the Iowa Test of Basic Skills ITBS These tests serve as an important measure of student achievement for the state s accountability system Results from these assessments are used to make state level decisions concerning education to meet Adequate Yearly Progress AYP reporting requirements of the No Child Left Behind Act NCLB and to inform schools and school districts of their performance The Nevada Department of Education has developed scales that are used to assign students to one of four performance levels on the Nevada CRT These are from the lowest cut score to the highest developing approaches meets and exceeds For purposes of NCLB the meets level is considered the level that represents satisfactory performance Students taking the Iowa Test of Basic Skills are also assigned to one of four levels These levels simply reflect the four quartiles reported in the ITBS norms Many students who attend school in Nevada also take tests developed in cooperation with the Northwest Evaluation Association NWEA These tests report student performance on a single cross grade scale which NWEA calls the RIT scale This study investigated the relationship between the scales used for the Nevada state assessments and the RIT scales used to report performance on NWEA tests The study determined RIT score equivalents for Nevada CRT and ITBS performance levels in reading and mathematics Nevada CRT test records for more than 2 000 students were included in this study Three methods generated an estimate of RIT cut scores that could be used to project Nevada CRT performance levels Rasch SOS methods generally produced the most accurate cut score estimates Accuracy of predicting Nevada CRT passing performance was above 84% for all grades when using the best methodology Type I errors ranged from about 8% to 14% when the best methodology was employed Contains 16 tables and figures
