Handbook of Research on Virtual Training and Mentoring of Online Instructors Keengwe, Jared,2018-07-06 To meet the dynamic academic demands of twenty first century digital learners many institutions of higher learning are offering more online classes than ever before that are accessible to both traditional and non traditional learners As such a growing demand for online courses implies that participating institutions provide faculty with appropriate professional development programs to ensure the design and delivery of quality online courses The Handbook of Research on Virtual Training and Mentoring of Online Instructors is a critical scholarly resource that highlights the issues challenges and online engagement experiences to enhance effective teaching and learning in this learning environment Featuring coverage on a broad range of topics such as media literacy professional development and virtual learning environments this book is geared towards educational administrators educators and instructional designers interested in quality online instruction Understanding Physics Using Mathematical Reasoning Andrzej Sokolowski,2021-08-20 This book speaks about physics discoveries that intertwine mathematical reasoning modeling and scientific inquiry It offers ways of bringing together the structural domain of mathematics and the content of physics in one coherent inquiry Teaching and learning physics is challenging because students lack the skills to merge these learning paradigms The purpose of this book is not only to improve access to the understanding of natural phenomena but also to inspire new ways of delivering and understanding the complex concepts of physics To sustain physics education in college classrooms authentic training that would help develop high school students

skills of transcending function modeling techniques to reason scientifically is needed and this book aspires to offer such training. The book draws on current research in developing students' mathematical reasoning. It identifies areas for advancements and proposes a conceptual framework that is tested in several case studies designed using that framework. Modeling Newton's laws using limited case analysis, Modeling projectile motion using parametric equations, and Enabling covariational reasoning in Einstein's formula for the photoelectric effect represent some of these case studies. A wealth of conclusions that accompany these case studies drawn from the realities of classroom teaching is to help physics teachers and researchers adopt these ideas in practice.
