2015 Passenger Car and 2014 Concept Car Yearbook Automotive Engineering International, 2014-11-21 Every year global automakers introduce new or significantly re engineered passenger vehicles with increasingly advanced technology intended to exceed consumer expectations and satisfy increasingly stringent government regulations Some of these technologies are firsts of their kind and start trends that other automakers soon follow with the innovations becoming adopted across the board The supply community is also increasingly playing a more significant role in helping the original equipment manufacturers research develop and introduce the latest engineering innovations that help bring competitive advantage for their automaker partners Each year the editors of SAE's Automotive Engineering magazine publish many articles focused on the technology and engineering innovations of new passenger and concept vehicles and these articles have been collected into this volume This 2015 Passenger Car and 2014 Concept Car Yearbook is the fourth in an ongoing series of books that provide yearly snapshots of the latest and greatest technologies introduced by the automotive industry In this book we explore from an OEM and supplier perspective the newest and most technically interesting production vehicles released for the 2015 model year In addition we also have included a technology focused recap of the concept cars revealed during 2014 Readers will have in one publication a complete overview of the key advances that took place over the course of the year from around the world Each new model is profiled in its own chapter with one or more articles by the award winning editors and contributors of Automotive Engineering in this exclusive compilation of print and online content The novel engineering aspects of each new vehicle are explored with exclusive interviews of key engineers and product developers providing insights you can only get from you can only get from Automotive Engineering This book is published for the most technically minded enthusiasts who are interested in new car technologies as well as practicing automotive engineers who are interested in new engineering trends Engineering trends explored focus on what engineers are doing to meet the sometimes conflicting consumer and governmental demands for improved vehicle fuel efficiency performance safety and comfort In short this book Provides a single source for information on the key engineering trends of the year from both automaker and supplier perspectives Allows the reader to skip to chapters that cover specific car models that interest them or read about all models from beginning to end Makes for dynamic book reading with its large number of big full color images and easy reading magazine format *Up and Running with Autodesk Navisworks 2014*, 2013-04-15 This textbook is specially written keeping in mind the requirements of plant and building industry Real world Plant and BIM models are used as examples in this textbook that also covers a number of pain points that the users face on day to day basis **Star Observer Magazine December 2014** Elias Jahshan, 2014-11-17 *Star Observer Magazine August 2014* Elias Jahshan, 2014-07-15 [Lemon-Aid New and Used Cars and Trucks 1990-2015](#) Phil Edmonston, 2013-11-18 Lemon Aid New and Used Cars and Trucks 1990-2015 steers the confused and anxious buyer through the purchase of new and used vehicles

K. Cheung, Simon C. Gandevia, 2017-04-17 In the study of sensorimotor systems an important research goal has been to understand the way neural networks in the spinal cord and brain interact to control voluntary movement Computational modeling has provided insight into the interaction between centrally generated commands proprioceptive feedback signals and the biomechanical responses of the moving body Research in this field is also driven by the need to improve and optimize rehabilitation after nervous system injury and to devise biomimetic methods of control in robotic devices This research topic is focused on efforts dedicated to identify and model the neuromechanical control of movement Neural networks in the brain and spinal cord are known to generate patterned activity that mediates coordinated activation of multiple muscles in both rhythmic and discrete movements e.g locomotion and reaching Commands descending from the

higher centres in the CNS modulate the activity of spinal networks which control movement on the basis of sensory feedback of various types including that from proprioceptive afferents The computational models will continue to shed light on the central strategies and mechanisms of sensorimotor control and learning This research topic demonstrated that computational modeling is playing a more and more prominent role in the studies of postural and movement control With increasing ability to gather data from all levels of the neuromechanical sensorimotor systems there is a compelling need for novel creative modeling of new and existing data sets because the more systematic means to extract knowledge and insights about neural computations of sensorimotor systems from these data is through computational modeling While models should be based on experimental data and validated with experimental evidence they should also be flexible to provide a conceptual framework for unifying diverse data sets to generate new insights of neural mechanisms to integrate new data sets into the general framework to validate or refute hypotheses and to suggest new testable hypotheses for future experimental investigation It is thus expected that neural and computational modeling of the sensorimotor system should create new opportunities for experimentalists and modelers to collaborate in a joint endeavor to advance our understanding of the neural mechanisms for postural and movement control The editors would like to thank Professor Arthur Prochazka who helped initially to set up this research topic and all authors who contributed their articles to this research topic Our appreciation also goes to the reviewers who volunteered their time and effort to help achieve the goal of this research topic We would also like to thank the staff members of editorial office of Frontiers in Computational Neuroscience for their expertise in the process of manuscript handling publishing and in bringing this ebook to the readers The support from the Editor in Chief Dr Misha Tsodyks and Dr Si Wu is crucial for this research topic to come to a successful conclusion We are indebted to Dr Si Li and Ms Ting Xu whose assistant is important for this ebook to become a reality Finally this work is supported in part by grants to Dr Ning Lan from the Ministry of Science and Technology of China 2011CB013304 the Natural Science Foundation of China No 81271684 No 61361160415 No 81630050 and the Interdisciplinary Research Grant cross Engineering and Medicine by Shanghai Jiao Tong University YG20148D09 Dr Vincent Cheung is supported by startup funds from the Faculty of Medicine of The Chinese University of Hong Kong Guest Associate Editors Ning Lan Vincent Cheung and Simon Gandevia
