Policy-Making in the GCC Neil

Quilliam, Mark C. Thompson, 2017-09-11 The GCC is a major player in the post 2011 reordering of the Middle East Despite the rise in prominence of individual Gulf states especially Kuwait Qatar Saudi Arabia and the United Arab Emirates and the growth of the GCC as a collective entity surprisingly little attention has been paid to the actual mechanics of policy making in the region This book analyses the vital role that institutions are coming to play in shaping policy in the Gulf Arab states The research coincides with two key developments that have given institutions new importance in the policy process the emergence of a new generation of leaders in the Gulf and the era of low oil prices Both developments along with dramatic demographic change have compelled state and citizens to re evaluate the nature of the social contract that binds them together Contributors assess the changing relationship between state and citizen and evaluate the role that formal and informal institutions play in mediating such change and informing policy The book shows how academic social and economic institutions are responding to the increasingly complex process of decision making where citizens demand better services and further empowerment and states are obliged to seek wider counsel although wanting to retain ultimate authority With contributions from both academics and practitioners this book will be highly relevant for researchers and policymakers alike

The Coalition Effect, 2010-2015 Anthony Seldon, Mike Finn, Illias Thoms, 2015-03-26 The essential verdict on Britain's first coalition government since the Second World War delivered by an unrivalled team of experts

Education in Spite of Policy Robin Alexander, 2021-12-30

A national system of education cannot function without policy But the path to practice is seldom smooth especially when ideology overrules evidence or when ministers seek to micromanage what is best left to teachers And once the media join the fray the mixture becomes downright combustible Drawing on his long experience as teacher researcher government adviser campaigner and international consultant and on over 600 published sources Robin Alexander expertly illustrates and illuminates these processes This selection from his recent writing some hitherto unpublished opens windows onto cases and issues that concern every teacher Part 1 tackles system level reform It revisits the Cambridge Primary Review an evidence rich enquiry into the condition and future of primary education in England which challenged the UK government's policies on curriculum testing standards and more besides Here the reform narratives and strategies of successive governments are confronted and dissected Part 2 follows the development of England's current National Curriculum exposing its narrow vision and questionable use of evidence and offering a more generous aims driven alternative This section also investigates the expertise and leadership needed if children are to experience a curriculum of

the highest quality in all its aspects Part 3 reaches the heart of the matter securing the place in effective pedagogy of well founded classroom talk a mission repeatedly frustrated by political intervention The centrepiece is dialogic teaching a proven tool for advancing students speaking thinking learning and arguing and an essential response to the corrosion of democracy and the nihilism of post truth Part 4 goes global It investigates governments PISA fuelled flirtations with what they think can be adapted or copied from education elsewhere examines the benefits and pitfalls of international comparison and ends with the ultimate policy initiative the United Nations mission to ensure inclusive and equitable quality education for all the world s children Education in Spite of Policy is for all those teachers students school leaders and researchers who value the conversation of policy evidence and practice and who wish to explore the parts of education that policy cannot reach

Quantum Economics David Orrell,2018-07-05 A decade after the financial crisis there is a growing consensus that economics has failed and needs to go back to the drawing board David Orrell argues that it has been trying to solve the wrong problem all along Economics sees itself as the science of scarcity Instead it should be the science of money which plays a surprisingly small role in mainstream theory And money is a substance that turns out to have a quantum nature of its own Just as physicists learn about matter by studying the exchange of particles at the subatomic level so economics should begin by analysing the nature of money based transactions Quantum Economics therefore starts with the meaning of the phrase how much or to use the Latin word quantum From quantum physics to the dualistic properties of money via the emerging areas of quantum finance and quantum cognition this profoundly important book reveals that quantum economics is to neoclassical economics what quantum physics is to classical physics a genuine turning point in our understanding
