Rury,2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree **Game Theory and Applications** Deng-Feng Li,Xiao-Guang Yang,Marc Uetz,Gen-Jiu Xu,2017-10-13 This volume constitutes the refereed post conference proceedings of the 3rd Joint China Dutch Workshop on Game Theory and Applications and the 7th China Meeting on Game Theory and Applications GTA 2016 held in Fuzhou China in November 2016 The 25 revised full papers presented were carefully reviewed and selected from 60 full paper submissions They deal with a broad range of topics in the areas of non cooperative and cooperative games non cooperative and cooperative games under uncertainty and their applications

Markets and People World Bank,2020-02-10 Romania s income per capita has increased from 26 percent of the EU 28 average in 2000 to 63 percent in 2017 but this economic success rests on the wobbly foundations of unfavorable demographics weak human capital and ineffective institutions Going forward stronger competition and better human capital

are critical to increasing the economy's growth potential. Romanian manufacturing firms are exposed to domestic and international competition ensuring the flow of resources and market shares to more efficient players. This has not been the case for services where anticompetitive regulations and direct state control often limit efficiency gains. Romanian state-owned enterprises do not compete on an equal footing with private sector firms, distorting market outcomes and hampering the efficient allocation of resources. Removal of these restrictions would have a significant positive impact on GDP growth. Competitively neutral policies are needed to ensure that all enterprises, public or private, domestic or foreign, face the same set of rules. Romania's human capital accumulation, proxied by the World Bank's Human Capital Index (HCI), is the lowest in the European Union and varies widely across counties. Disparities in education outcomes remain relevant across and within regions of Romania. Learning gaps in primary and secondary education persist. These can be seen clearly between urban and rural areas, across regions, and across social groups, requiring changes both at the systems level and at the learning center level. In the labor market, the automation of production processes has started driving demand for higher levels of cognitive skills, while jobs involving the routine application of procedural knowledge are shrinking in number. A paradigm shift would require reforms in primary and secondary schooling, in addition to more targeted actions to establish an effective skills development system to bolster human capital.

Congressional Record , Breaking the STEM Stereotype Amanda Alzena Sullivan, 2019-10-21. Men continue to outnumber women in numerous technical STEM (Science, Technology, Engineering, and Math) fields such as engineering and computer science. Prior work demonstrates the importance of introducing girls to STEM content early on, before gender stereotypes are ingrained. However, many parents and teachers are not sure how to do this in a developmentally appropriate and playful way. *Breaking the STEM Stereotype: Reaching Girls in Childhood* by Dr. Amanda Sullivan, Ph.D., explores the various social, cultural, and psychological reasons behind the persistent gender disparity between men and women in STEM fields. By explaining the powerful role of stereotypes, the media, and experiences with peers and adults during the foundational early childhood years, this book builds the case of early childhood being a critical time in development to reach girls. *Breaking the STEM Stereotype* is set up in three parts. Part 1 provides the current state of the gender divide in each aspect of STEM and explores why early childhood is a critical time to address this divide. Part 2 explores gender identity development and gender stereotypes as well as the influences of the media, advertising, and adult and peer role models on young children. Finally, Part 3 arms readers with the knowledge they need to dispel gender stereotypes in STEM. It provides suggestions on tools, technologies, and kits that can be used with young girls beginning in pre-kindergarten. It provides materials needed to design effective curricula and activities to engage girls with STEM in playful ways that build on their personal interests.

Competency-Based Education Rose L. Colby, 2019-01-02. Competency-Based Education introduces educators to a new model for anytime, anywhere schooling and provides tools and curriculum resources for redesigning the traditional structures of K-12 schools.
