Innovation in the Asia Pacific Thomas Clarke, Keun Lee, 2017-10-20 This book promotes the creation of advanced knowledge based economies driven by innovation networks and the continuous development of human capital and capability It provides valuable insights into the growing emergence of knowledge based industries of the Asia Pacific and highlights research on modes of creativity and innovation intellectual property the components of national innovation systems such as firms education and training knowledge and technical infrastructure and public policy The Asia Pacific region is currently in the process of transforming from being the manufacturing centre of the global economy to a centre of innovation for the knowledge economy with the successful IPO of Alibaba in 2014 being a prime example of this shift From a neo Schumpeterian perspective the region is increasingly engaged in shortening and intensifying cycles of innovation The historic agreement at the Beijing APEC meeting between China and the US to radically reduce carbon emissions indicates that one imperative of this innovation is to contribute to sustainability The fact that the US Government is moving away from this historic commitment while the Chinese Government is endorsing the commitment indicates an emerging opportunity for Asia to lead the world technologically in a vital industrial sector of the future **Civil Society and the Reform of Finance**

Charles McDaniel, Jr., 2015-07-16 Efforts to resolve the recent financial crisis have obscured a more deeply rooted financialization crisis that impacts not only the market economy but also the vital civic and moral traditions that support it This book reveals the cultural influence of finance in reshaping the foundations of American civil society and proposes a return to certain first principles of the Republic to restore the nation's economic vision This book demonstrates how funding concerns and financial incentives revalue faith traditions educational institutions non profit organizations and even the nation's healthcare system in ways that are eroding the diversity of American culture These changes also undermine the ethical

framework of both democratic government and the free market system While financial influence has diminished the value of civil society this book proposes that revitalized intermediary institutions still offer the best path forward in restoring the financial sector and more broadly enriching the American competitive ethic toward development of a more virtuous economy The book is written for an academic and professional audience offering a blueprint for the involvement of civil society with government in providing more communally integrated oversight that could contribute to a genuine democratization of finance

Augmentation of Brain Function: Facts, Fiction and Controversy Manuel F. Casanova, Mikhail Lebedev, Ioan Opris, 2018-09-14 The final volume in this tripartite series on Brain Augmentation is entitled From Clinical Applications to Ethical Issues and Futuristic Ideas Many of the articles within this volume deal with translational efforts taking the results of experiments on laboratory animals and applying them to humans In many cases these interventions are intended to help people with disabilities in such a way so as to either restore or extend brain function Traditionally therapies in brain augmentation have included electrical and pharmacological techniques In contrast some of the techniques discussed in this volume add specificity by targeting select neural populations This approach opens the door to where and how to promote the best interventions Along the way results have empowered the medical profession by expanding their understanding of brain function Articles in this volume relate novel clinical solutions for a host of neurological and psychiatric conditions such as stroke Parkinson's disease Huntington's disease epilepsy dementia Alzheimer's disease autism spectrum disorders ASD traumatic brain injury and disorders of consciousness In disease symptoms and signs denote a departure from normal function Brain augmentation has now been used to target both the core symptoms that provide specificity in the diagnosis of a disease as well as other constitutional symptoms that may greatly handicap the individual The volume provides a report on the use of repetitive transcranial magnetic stimulation rTMS in ASD with reported improvements of core deficits i.e. executive functions TMS in this regard departs from the present day trend towards symptomatic treatment that leaves unaltered the root cause of the condition In diseases such as schizophrenia brain augmentation approaches hold promise to avoid lengthy pharmacological interventions that are usually riddled with side effects or those with limiting returns as in the case of Parkinson's disease Brain stimulation can also be used to treat auditory verbal hallucination visuospatial hemispatial neglect and pain in patients suffering from multiple sclerosis The brain acts as a

telecommunication transceiver wherein different bandwidth of frequencies brainwave oscillations transmit information Their baseline levels correlate with certain behavioral states The proper integration of brain oscillations provides for the phenomenon of binding and central coherence Brain augmentation may foster the normalization of brain oscillations in nervous system disorders These techniques hold the promise of being applied remotely under the supervision of medical personnel thus overcoming the obstacle of travel in order to obtain healthcare At present traditional thinking would argue the possibility of synergism among different modalities of brain augmentation as a way of increasing their overall effectiveness and improving therapeutic selectivity Thinking outside of the box would also provide for the implementation of brain to brain interfaces where techniques proper to artificial intelligence could allow us to surpass the limits of natural selection or enable communications between several individual brains sharing memories or even a global brain capable of self organization Not all brains are created equal Brain stimulation studies suggest large individual variability in response that may affect overall recovery treatment or modify desired effects of a given intervention The subject's age gender hormonal levels may affect an individual's cortical excitability In addition this volume discusses the role of social interactions in the operations of augmenting technologies Finally augmenting methods could be applied to modulate consciousness even though its neural mechanisms are poorly understood Finally this volume should be taken as a debate on social moral and ethical issues on neurotechnologies Brain enhancement may transform the individual into someone or something else These techniques bypass the usual routes of accommodation to environmental exigencies that exalted our personal fortitude learning exercising and diet This will allow humans to preselect desired characteristics and realize consequent rewards without having to overcome adversity through more laborious means The concern is that humans may be playing God and the possibility of an expanding gap in social equity where brain enhancements may be selectively available to the wealthier individuals These issues are discussed by a number of articles in this volume Also discussed are the relationship between the diminishment and enhancement following the application of brain augmenting technologies the problem of mind control with BMI technologies free will the duty to use cognitive enhancers in high responsibility professions determining the population of people in need of brain enhancement informed public policy cognitive biases and the hype caused by the development of brain augmenting approaches

The UK Regional-National Economic Problem Philip McCann, 2016-03-10 In recent years the United Kingdom has become a more and more divided society with inequality between the regions as marked as it has ever been In a landmark analysis of the current state of Britain's regional development Philip McCann utilises current statistics examines historical trends and makes pertinent international comparisons to assess the state of the nation The UK Regional National Economic Problem brings attention to the highly centralised top down governance structure that the UK deploys and demonstrates that it is less than ideally placed to rectify these inequalities The North South divide in the UK has never been greater and the rising inequalities are evident in almost all aspects of the economy including productivity incomes

employment status and wealth Whilst the traditional economic dominance of London and its hinterland has continued along with relative resilience in the South West of England and Scotland in contrast the Midlands the North of England Northern Ireland and Wales lag behind by most measures of prosperity This inequality is greatly limiting national economic performance and the fact that Britain has a below average standard of living by European and OECD terms has been ignored The UK s economic and governance inequality is unlikely to be fundamentally rebalanced by the current governance and connectivity trends although this definitive study suggests that some areas of improvement are possible if they are well implemented This pivotal analysis is essential reading for postgraduate students in economics and urban studies as well as researchers and policy makers in local and central government **Independent Directors in Asia** Dan W.

Puchniak,Harald Baum,Luke Nottage,2017-11-02 The first in depth analysis of the independent director in Asia who they are what they do and how they are regulated **Handbook of Research on Comparative Economic Development**

Perspectives on Europe and the MENA Region Erdoğan, M. Mustafa,Christiansen, Bryan,2016-01-07 The MENA Middle East and North Africa region s economy is experiencing steady growth and is expanding as an active participant in investments with Europe the Americas and Asia Complex deals by transnational corporations TNCs and small and medium sized enterprises SMEs serve to influence European and MENA businesses government technology and society The Handbook of Research on Comparative Economic Development Perspectives on Europe and the MENA Region provides scholarly information about European and MENA economies at a time when these regions are becoming increasingly connected The need to understand their economies has never been more necessary and the research based chapters of this book covering a wide array of information regarding corruption and reform ethics and society and the effects of Western cultures provide scholars business executives practitioners and students with current information on the region s lucrative investments and fast growing economy **Strategic Communication Theory and Practice** Carl H. Botan,2017-12-18 A
