ECKM2014-Proceedings of the 15th European conference on Knowledge Management Carla Vivas, 2014-10-01

The world economy in which we are living poses challenges that lead to a realization that more of the same will be difficult to sustain. This provides an illustration that in order to create new or modified knowledge practices, strengthen customer relationships, and thus positively influence customer satisfaction, organizations must be flexible in configuring, combining knowledge and knowledge structures in a way that is appropriate for delivering value to the customer. It must simultaneously develop effective strategies for updating the knowledge of its staff members necessary for underpinning the creation and delivery of appropriate knowledge services. Thus, unlearning/forgetting becomes a critical means for organizational success. The ECKM community of scholars has already initiated dialogue that links its particular strengths to innovation issues. This conference aims to further that dialogue by attracting leading edge work that leverages the ECKM community's in-depth understanding of learning and unlearning to better understand knowledge management. Our aim is to stimulate breakthrough research streams linking learning, unlearning, and knowledge management. How can organizations tailor use and extend techniques and tools from knowledge management for improving their business practices and processes? Building upon existing work on knowledge management, KM, and organizational learning, the conference will promote interdisciplinary approaches from computer science and information systems, business management, and organization science, as well as cognitive science. Emphasis will be put on systematic learning from experience, KM tools, and KM success factors. A special interest belongs to knowledge management initiatives which are lightweight, i.e., do not place considerable additional burden on users, and KM experts allow an incremental adoption, i.e., do not require large up-front investment before any return of investment is at least visible, and are flexible regarding frequent changes in experts and topics. Continuing the success of the ECKM conference series since 2000, the 2015 conference will provide an international communication forum bringing together academia and industry for discussing the progress made and addressing the challenges faced by continuous learning in knowledge intensive organizations.

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015. Today about 98 percent of scientists affirm that climate change is human-made and about 2 percent still question it. Despite that overwhelming majority, though, about half the population of rich countries like ours choose to believe the 2 percent. And paradoxically, this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades. This disconnect has both climate scientists and activists scratching their heads, growing anxious, and responding usually by repeating more facts to win the argument. But the more climate facts pile up, the greater the resistance to them grows, and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead. Is humanity up to the task? It is a catch 22 that starts, says psychologist and climate expert Per Espen Stoknes, from an inadequate understanding of the way most
