Generative and Transformational Techniques in Software Engineering II Ralf Lämmel,Joost Visser,João

Saraiva,2008-10-08 The second instance of the international summer school on Generative and Transformational Techniques in Software Engineering GTTSE 2007 was held in Braga Portugal during July 2 7 2007 This volume contains an augmented selection of the material presented at the school including full tutorials short tutorials and contributions to the participants workshop The GTTSE summer school series brings together PhD students lecturers technology presenters as well as other researchers and practitioners who are interested in the generation and the transformation of programs data models metamodels documentation and entire software systems This concerns many areas of software engineering software reverse and re engineering model driven engineering automated software engineering generic language technology to name a few These areas differ with regard to the specific sorts of metamodels or grammars schemas formats etc that underlie the involved artifacts and with regard to the specific techniques that are employed for the generation and the transformation of the artifacts The first instance of the school was held in 2005 and its proceedings appeared as volume 4143 in the LNCS series

Power Estimation on Electronic System Level using Linear Power Models Stefan Schuermans,Rainer Leupers,2018-12-14

This book describes a flexible and largely automated methodology for adding the estimation of power consumption to high level simulations at the electronic system level ESL This method enables the inclusion of power consumption considerations from the very start of a design This ability can help designers of electronic systems to create devices with low power consumption The authors also demonstrate the implementation of the method using the popular ESL language SystemC This implementation enables most existing SystemC ESL simulations for power estimation with very little manual work Extensive case studies of a Network on Chip communication architecture and a dual core application processor ARM Cortex A9 showcase the applicability and accuracy of the method to different types of electronic devices The evaluation compares various trade offs regarding amount of manual work types of ESL models achieved estimation accuracy and impact on the simulation speed Describes a flexible and largely automated ESL power estimation method Shows implementation of power estimation methodology in SystemC Uses two extensive case studies to demonstrate method introduced *Maximum PC*
