Regulatory Frameworks for Dam Safety Daniel D. Bradlow, Alessandro Palmieri, Salman M. A. Salman, 2002-10-01

Regulatory Frameworks for Dam Safety was conceived and prepared in response to growing concern over the safety of dams. Given the large number of dams around the world, the safe operation of dams has significant social, economic, and environmental relevance. A dam failure can result in extremely adverse impacts, including a large-scale loss of human life. For countries with large stocks of dams, the issue of dam safety is critical. The book examines the dam safety regulatory frameworks of 22 countries. It draws comparisons and highlights similarities among the various systems. Most important, it identifies essential elements, desirable features, and emerging trends for dam safety regulatory frameworks. The authors are leading experts in their fields. Daniel Bradlow is professor and director of the International Legal Studies Program at the Washington College of Law at American University and was a consultant to the World Commission on Dams. Alessandro Palmieri is Lead Dam Specialist in the Quality Assurance and Compliance Unit of the Environmentally and Socially Sustainable Development Vice Presidency at the World Bank. Salman M. A. Salman is Lead Counsel in the Environmentally and Socially Sustainable Development and International Law Group of the World Bank's Legal Vice Presidency and has published extensively in the area of water law.

The Hydraulic Transport and Storage of Extractive Waste Mike Cambridge, 2018-01-18 This book offers the guidelines on long term confinement of fine particulate waste products in a safe and environmentally acceptable location It seeks to present the state of the art drawing on combined experience from within

the European Union EU on good international practice where relevant and on lessons learnt from recent untoward incidents These guidelines have been developed in parallel with the development of the European Standard on Earthworks prEN 16907 and the contents have been influenced by the well publicised need for guidance to all stakeholders on both technical and regulatory aspects of the permitting design and construction of extractive waste facilities in Europe The Extractive Waste Directive EWD imposes a duty on all operators and regulators to ensure the competent design operation and closure of such facilities However though some guidance has been published on a limited number of related technical elements the relevance of these contributions has been diminished by the lack of an integrated approach It is now evident to both regulatory bodies and operators alike that a unified and comprehensive document providing guidance to all stakeholders is required if the future of mining within the EU is to be assured and further untoward incidents avoided These guidelines seek to address all technical stages of the development of a hydraulic fill project in the context of the EWD with an emphasis on waste and facility characterisation and on the risk based assessments which underwrite them They are intended for use by all stakeholders involved in those European industries which involve the generation transport and storage of fine particulate waste products requiring long term confinement in a safe stable and environmentally acceptable location **ICDSME 2019** Lariyah Mohd Sidek,Gasim Hayder Ahmed Salih,Mohd Hariffin Boosroh,2019-12-02 This book presents peer reviewed articles from the 1st International Conference on Dam Safety Management and Engineering ICDSME 2019 organized by the Malaysian National Committee on Large Dams MYCOLD Tenaga Nasional Berhad TNB Department of Irrigation and Drainage DID and Universiti Tenaga Nasional UNITEN With the theme resilient dams for resilient communities the conference highlighted the latest developments in the area and provided a platform for researchers and professionals to exchange ideas and to address dam safety and engineering issues with the environment in mind The topics covered included but was not limited to best practices in dam safety reservoir management dam health monitoring risk assessment emergency management and sustainable dams **New Trends in Water and Environmental Engineering for Safety and Life U.** Maione,B. Majone-Lehto,R. Monti,2000-01-01 This volume looks at recent scientific knowledge and innovative techniques concerning environmental matters The proceedings focus on topics such as hydraulic protection of territory and defence utilization of water resources architecture and planning of fluvial coastal landscape and much more Climate Change and Disaster Risk Management Walter Leal Filho,2012-08-10 There has been some degree of reluctance in the past to consider disaster risk management within the mainstream of adaptation to climate variability and climate change However there is now wide recognition of the need to incorporate disaster risk management concerns in dealing with such phenomena There is also a growing awareness of the necessity for a multi sectoral approach in managing the effects of climate variability and climate change since this can lead to a significant reduction of risk This book presents the latest findings from scientific research on climate variation climate change and their links with disaster risk management It showcases projects and other

initiatives in this field that are being undertaken in both industrialised and developing countries by universities and scientific institutions government bodies national and international agencies NGOs and other stakeholders Finally it discusses current and future challenges identifying opportunities and highlighting the still unrealised potential for promoting better understanding of the connections between climate variation climate change and disaster risk management worldwide
