Anesthesia Relative Value Guide 23:

Geriatric Anesthesiology J. G. Reves, Sheila Ryan Barnett, Julie R. McSwain, G. Alec Rooke, 2017-10-27 Surgical and anesthetic techniques have evolved to allow a growing number of older adults to undergo surgery and current estimates are that 50% of Americans over the age of 65 years old will have an operation. However, as the knowledge regarding perioperative care of the elderly surgical patient grows, so do the questions. In this edition, each chapter includes a section entitled Gaps in Our Knowledge meant to highlight areas in which research is needed as well as hopefully inspire readers to begin solving some of these questions themselves. Building upon the strong foundation of the first two editions, Geriatric Anesthesiology 3rd edition also assembles the most up-to-date information in geriatric anesthesia and provides anesthesiologists with important new developments. Topics covered include several new chapters that reflect the evolution of multidisciplinary geriatric care throughout the perioperative continuum as well as the growing body of literature related to prehabilitation. In addition, discussion of the surgeon's perspective and geriatrician's perspective on surgery in the geriatric population is covered as well as the systematic physiologic changes associated with aging and the pharmacologic considerations for the geriatric patient undergoing procedures. Finally, the last section discusses postoperative care specific to the geriatric population including acute pain management, ICU management, recent evidence, and up-to-date practice regarding delirium and postoperative cognitive dysfunction and palliative care.

Evidence-based Anaesthesia and Intensive Care Ann Møller, Tom Pedersen, 2006-10-09 A comprehensive 2006 volume on the theories and applications of evidence-based anaesthesia and critical care. Coming from the internationally renowned Cochrane Collaboration, the global force in evidence-based medicine, this promises to be an authoritative guide for anaesthetists. The Cochrane Anaesthesia Review Group is one of the largest in the collaboration and as coordinators of the group, the editors of this book have gathered a formidable set of contributions from around the world. The first half of the book provides an introduction to evidence-based medicine and applies the principles to anaesthesia and critical care, including critical appraisal, meta-analysis, interpreting results, and controlling bias. The second half shows how to practise this in preoperative evaluation, regional and general anaesthesia, postoperative pain therapy, critical care, and acute medicine. Medical professionals working in anaesthesia and surrounding specialties worldwide will find this book immensely useful.
