Cells are Life Dr Larry C Fowke, 2021-09-29 All organisms on earth are composed of cells They come in many shapes and sizes and are involved in a wide range of activities Cells are the smallest structures that can divide independently reproduce and are therefore the smallest structures to be alive This book considers the structure and function of plant and animal cells with an emphasis on plant cells Cells contain many organelles that interact to allow function For example plant cells unlike animal cells contain chloroplasts that enable them to take energy from the sun to be used for growth and development They manufacture energy rich sugars that are sent to the mitochondria where the energy is removed as ATP that can be used to do work in the cell Meanwhile animals depend upon plants for their energy source Cells are Life provides answers to better understand the plant life all around us Do plant cells have muscles Why should children not eat the leaves of the common house plant Dieffenbachia Is it true that structures inside plant and animal cells move using tiny motors Why do animal cells need a skeleton and plant cells don't Is it true that rubber comes from a specialized plant cell Arming readers with this deeper understanding Cells are Life then addresses controversial topics such as genetic engineering cloning and the nature of stem cells

Plant Cells Vs Animal Cells Rebecca Woodbury, Rebecca Woodbury Ph. D., 2020-06-26 In the leveled reader Plant Cells vs Animal Cells fundamental science concepts in biology are explained through simply written text and colorful fun illustrations Young readers will discover that plants and animals have different types of cells Cells are made of atoms and molecules and do different jobs inside living things Both plant cells and animal cells are surrounded by a cell membrane and have organelles which are structures inside cells that do different jobs The nucleus of a cell is the organelle where DNA is made and held DNA is a strand of linked atoms that tell the cell what to do A ribosome is an organelle that makes proteins which are long chains of atoms Proteins do all the work inside a cell cutting joining and moving molecules A mitochondrion is an organelle that makes energy for the cell Plant and animal cells are also different Plant cells have a stiff outer cell wall in addition to a cell membrane Animals cells have only a cell membrane Plant cells have chloroplasts which are organelles that catch sunlight to make food Animal cells do not have chloroplasts and do not make food from sunlight Animals get their food from eating other animals and plants A pronunciation guide of scientific terms is included 24 pages filled with engaging colorful illustrations Reading Level 1 3 Interest Level 2 5 *Understanding Plant and Animal Cells* Lillian Burton, 2016-10-22 Most life science and high school biology courses have cell structure and function listed as one of the standards that students are required to pass This book was developed to address structure and function of organelles in plant and animal cells After using this as a study guide students should be able to compare plant and animal cell function
