Adaptation and Fitness in Animal Populations Julius van der Werf, Hans-Ulrich Graser, Richard Frankham, Cedric Gondro, 2008-10-17 Fitness and adaptation are fundamental characteristics of plant and animal species enabling them to survive in their environment and to adapt to the inevitable changes in this environment This is true for both the genetic resources of natural

ecosystems as well as those used in agricultural production Extensive genetic variation exists between varieties breeds in a species and amongst individuals within breeds This variation has developed over very long periods of time A major ongoing challenge is how to best utilize this variation to meet short term demands whilst also conserving it for longer term possible use Many animal breeding programs have led to increased performance for production traits but this has often been accompanied by reduced fitness In addition the global use of genetic resources prompts the question whether introduced genotypes are adapted to local production systems Understanding the genetic nature of fitness and adaptation will enable us to better manage genetic resources allowing us to make efficient and sustainable decisions for the improvement or breeding of these resources This book had an ambitious goal in bringing together a sample of the world s leading scientists in animal breeding and evolutionary genetics to exchange knowledge to advance our understanding of these vital issues

Nomadic and Indigenous Spaces Judith Miggelbrink,Joachim Otto Habeck,Nuccio Mazzullo,Peter Koch,2016-05-06 This volume is devoted to aspects of space that have thus far been largely unexplored How space is perceived and cognised has been discussed from different stances but there are few analyses of nomadic approaches to spatiality Nor is there a sufficient number of studies on indigenous interpretations of space despite the importance of territory and place in definitions of indigeneity At the intersection of geography and anthropology the authors of this volume combine general reflections on spatiality with case studies from the Circumpolar North and other nomadic settings Spatial perceptions and practices have been profoundly transformed by new technologies as well as by new modes of social and political interaction How do these changes play out in the everyday lives identifications and political projects of nomadic and indigenous people This question has been broached from two seemingly divergent stances spatial cognition on the one hand and production of space on the other Bringing these two approaches together this volume re aligns the different strings of scholarship on spatiality making them applicable and relevant for indigenous and nomadic conceptualizations of space place and territory
