Varju, 2013-06-29 The subject of this volume is two fold First it gathers typical polarization patterns occurring in nature Second it surveys the polarization sensitive animals the physiological mechanisms and biological functions of polarization sensitivity as well as the polarization guided behaviour in animals The monograph is prepared for biologists physicists and meteorologists especially for experts of atmospheric optics and animal vision who wish to understand and reveal the

message hidden in polarization patterns of the optical environment not directly accessible to the human visual system but measurable by polarimetry and perceived by many animals Our volume is an attempt to build a bridge between these two physical and biological fields In Part I we introduce the reader to the elements of imaging polarimetry This technique can be efficiently used e g in atmospheric optics remote sensing and biology In Part II we deal with typical polarization patterns of the natural optical environment Sunrise sunset clear skies cloudy skies moonshine and total solar eclipses all mean quite different illumination conditions which also affect the spatial distribution and strength of celestial polarization We present the polarization patterns of the sky and its unpolarized neutral points under sunlit moonlit clear cloudy and eclipsed conditions as a function of solar elevation The polarization pattern of a rainbow is also shown That part of the spectrum is derived in which perception of skylight polarization is optimal under partly cloudy skies
