APUSH AMSCO NOTES - UNIT THREE (1754-1800)

Chapter 9: Imperial Wars and Colonial Protest

Empires at War

- Late in the 17th century, war broke out involving Great Britain, France and Spain
- Wars had high stakes bc the winner would stand to gain supremacy in the West Indies and Canada to dominate lucrative colonial trade. These wars included:
 - King William's War (1689-1697) and Queen Anne's War (1702-1713)
 - British launched expeditions to capture Quebec but failed in both events
 - King George's War (1744-1748)
 - British colonies were under attack from their perennial rivals, the French and the Spanish
 - James Oglethorpe led a colonial army that managed to evade Spanish attacks
 - The Seven Years War (French and Indian War)
 - North American phase is often referred to as the French and Indian War
 - British POV: French provoked this war by building a chain of forts in Ohio River Valley, halting the westward expansion of British colonies
 - The Governor of Virginia sent a small troop of militia led by George Washington to win control of the Ohio River valley, in which the colonies were successful, sparking conflict between Britain and France
 - After years of fighting, first in North America, then in Europe, British were named victorious with the Peace of Paris (1763), which basically gave Britain a lot and France got next to nothing.
 - Britain was established as the dominant naval power in the world and walked away from the war with a low opinion of colonial military abilities.
 - Colonies thought the opposite and felt confident that they could provide or their own defense.

The Evolution of Biological Information Christoph Adami, 2024-01-16 Why information is the unifying principle that allows us to understand the evolution of complexity in nature More than 150 years after Darwin's revolutionary On the Origin of Species we are still attempting to understand and explain the amazing complexity of life Although we now know how evolution proceeds to build complexity from simple ingredients quantifying this complexity is still a difficult undertaking In this book Christoph Adami offers a new perspective on Darwinian evolution by viewing it through the lens of information theory This novel theoretical stance sheds light on such matters as how viruses evolve drug resistance how cells evolve to communicate and how intelligence evolves By this account information emerges as the central unifying principle behind all of biology allowing us to think about the origin of life on Earth and elsewhere in a systematic manner Adami a leader in the field of computational biology first provides an accessible introduction to the information theory of biomolecules and then shows how to apply these tools to measure information stored in genetic sequences and proteins After outlining the experimental evidence of the evolution of information in both bacteria and digital organisms he describes the evolution of robustness in viruses the cooperation among cells animals and people and the evolution of brains and intelligence Building on extensive prior work in

bacterial and digital evolution Adami establishes that expanding on Dobzhansky's famous remark nothing in biology makes sense except in the light of information Understanding that information is the foundation of all life he argues allows us to see beyond the particulars of our way of life to glimpse what life might be like in other worlds Motif Programming in the X Window System Environment William A.
