Semiotic Agency Alexei Sharov, Morten Tønnessen, 2022-02-08 This book invites readers to embark on a journey into the world of agency encompassing humans other organisms cells intracellular molecular agents colonies populations ecological systems and artificial autonomous systems We combine mechanistic and non mechanistic approaches in the analysis of the function and evolution of organisms their subagents and multi organism systems and in this way offer a theoretical platform for integrating biosemiotics with both natural science and the humanities social sciences Agents are autonomous systems that incorporate knowledge on how to make sense of their environment and use it to achieve their goals The functions of all agents are supported by mechanisms at the lowest level however the explanatory power of mechanistic analysis is not sufficient for complex agents Non mechanistic methods rely on the goal directedness of agents whose dynamics follow self stabilized dynamic attractors The properties of attractors depend on stable or slowly changing factors and such dependencies can be interpreted as sign relations if they are adaptive in nature Agents can replace or redirect mechanisms on demand in order to preserve their functions for performing higher level semiotic functions mechanisms are thus only means We assume that mechanism and semiosis are not mutually exclusive and that simple agents can interpret signs mechanistically This assumption allows us to extend semiotic analysis to all agents including ribosomes in cells computers and robots This book challenges established traditions in natural science and the humanities social sciences semiotics no longer appears as restricted to humans and rational thinking and biology is no longer limited to rely exclusively on mechanistic reasoning

An Ape Ethic and the Question of Personhood Gregory F. Tague, 2020-03-05 Gregory F Tague s *An Ape Ethic and the Question of Personhood* argues that great apes are moral individuals because they engage in a land ethic as ecosystem engineers to generate ecologically sustainable biomes for themselves and other species Tague shows that we need to

recognize apes as eco engineers in order to save them and their habitats and that in so doing we will ultimately save earth s biosphere The book draws on extensive empirical research from the ecology and behavior of great apes and synthesizes past and current understanding of the similarities in cognition social behavior and culture found in apes Importantly this book proposes that differences between humans and apes provide the foundation for the call to recognize forest personhood in the great apes While all ape species are alike in terms of cognition intelligence and behaviors there is a vital contrast unlike humans great apes are efficient ecological engineers Therefore simian forest sovereignty is critical to conservation efforts in controlling global warming and apes should be granted dominion over their tropical forests Weaving together philosophy biology socioecology and elements from eco psychology this book provides a glimmer of hope for future acknowledgment of the inherent ethic that ape species embody in their eco centered existence on this planet **An Ethics Beyond Kevin**

Richard Kaiser,2019-07-22 This study examines the fiction of contemporary American author George Saunders in terms of how it presents situations applicable to the chief notions of posthumanist ethics and how these conceptions concern nonhuman animals which are prevalent in his writing Posthumanist ethics can help us understand what is at play in Saunders s fiction Meanwhile his texts can help us understand what is at stake in posthumanist ethics This interdisciplinary project may be beneficial both to conceiving new notions of ethics that are more inclusive and more implicitly to understanding the relevance of Saunders s fiction to the current American sociocultural climate *The Humean Mind* Angela

Coventry,Alexander Sager,2018-10-26 David Hume 1711 1776 is widely acknowledged as one of the most important philosophers in the English language with his work continuing to exert major influence on philosophy today His empiricism naturalism and psychology of the mind and the passions shape many positions and approaches in the sciences and social sciences The Humean Mind seeks to provide a comprehensive survey of his work not only placing it in its historical context but also exploring its contemporary significance Comprising 38 chapters by a team of international contributors the Handbook is divided into four sections Intellectual context Hume s thought Hume s reception Hume s legacy This handbook includes coverage of all major aspects of Hume s thought with essays spanning the full scope of Hume s philosophy Topics explored include Hume s reception in the eighteenth and nineteenth centuries Hume s legacy in the twentieth and twenty first centuries Hume s history including an essay on Hume as historian as well as essays on the relevance of history to Hume s philosophy and his politics and an updated treatment of Hume s Legal Philosophy Also included are essays on race gender and animal ethics Essential reading for students and researchers in philosophy Hume s work is central to epistemology metaphysics philosophy of mind philosophy of science ethics legal philosophy and philosophy of religion *Animals, Mind, and Matter* Josephine Donovan,2022-10-01

It s no secret that animals are considered objects in the fields of law commerce and science characterized as property and commodities *Animals Mind and Matter* The Inside Story challenges this ascription and establishes that animals are living subjects who have minds and opinions of their own and care about what happens to

them Donovan contends that animals voices or standpoints should be part of any human decisions concerning their ethical treatment Elaborating on feminist care theory and critical animal standpoint theory the author provides compelling evidence for animal subjectivity exploring in the process the nature of subjectivity and consciousness while drawing from recent developments in quantum and emergence theories that point away from the dominant ontology of Cartesian objectivism Through these explorations Donovan proposes that a new narrative is emerging in the arts and sciences an inside story that re subjectifies natural life and leaves behind the deadening Midas touch of Cartesian objectivism
