Hormones and Behavior

Objective:

- To explain how the endocrine system integrates sensory input and output.
- To understand the long-term effects of in utero exposure to hormones.
- To describe the role of vasopressin in sociality.

Background:

Hormones change the probability that a specific sensory input leads to a specific output. They can do this in several ways: they can modify behavior by changing the frequency or duration, they may trigger the start or end, or prime animals to the stimulus, or alternatively to behave a certain way.

Model:

Complex effects of hormones

Animal Hormones John W. Buckle, 1983 **Animal hormones** Penelope Margaret Jenkin, 1962 *Animal Hormones* Penelope M. Jenkin, 2013-10-22 *Animal Hormones A Comparative Survey Part I Kinetic and Metabolic Hormones* provides a comprehensive coverage of the properties of kinetic and metabolic hormones of both vertebrates and invertebrates the title particularly covers the sources actions and secretion of the said hormones The text first details the general concerns with the hormones such as the history chemical activators mechanical activation types and identification The next chapter covers the sources of kinetic and metabolic hormones Chapters 3 and 4 tackle kinetic hormones while Chapter 5 discusses metabolic hormones The book will be of great interest to students researchers and practitioners of zoology and biochemistry

Hormonal Regulation of Farm Animal Growth K. L. Hossner, 2005 This book describes the cellular and molecular mechanisms that control farm animal growth including development and body composition The emphasis is on circulating hormones local growth factors and gene transcription factors which regulate growth and differentiation of skeletal muscle bone and adipose tissue Overall this book will be an important resource for students that have a limited background in cell molecular and developmental biology and the effect of endocrine and growth factors on the growth process **Control and Manipulation of Animal Growth** P. J. Buttery, Derek Barber Lindsay, N. Bruce Haynes, 1986 Environmental effects on growth and development Gut active growth promoters The effects of steroid hormones and xenobiotics on growth of farm animals The growth of bone The growth and metabolism of adipocytes The neurophysiological control of growth Epidermal growth factor origins cellular actions and some possible physiological roles Growth hormone and growth in meat producing animals The role of prostaglandins in the control of muscle protein turnover Insulin and growth Glucocorticoid status and growth Hormonal regulation of growth in chickens Metabolic and hormonal interactions and their potential effects on growth Effects of B adrenergic agonists on metabolism and body composition Growth hormone releasing factor GRF physiological and immunological studies Hormonal manipulations of animal production by immunoneutralization Recombinant gene transfer in animal the potential for improving growth in livestock Safety aspects of growth manipulation in animals *Analyses for Hormonal Substances in Food Producing Animals* Jack F. Kay, 2010 This unique and definitive reference on hormone abuse in food producing animals is for scientists regulators and consumers It contains the results of a meeting held in November 2006 to discuss the progress made by the Veterinary Medicines Directorate VMD supported programme on steroid abuse detection When the hormone ban first arose in the EU there were only 15 Member States There are now 27 and some newer members

lack the background knowledge of this issue This book sets out to summarise the history and show the significant progress that has been and continues to be made in this area It is the only comprehensive review of this subject available and contains input from leading researchers from around the world The initial chapters provide valuable background information For example the chapter on toxicology and risk covers the controversies arising from the interpretation of the effects of artificial hormones in meat producing animals The book then goes on to deal with how the issue has been managed via national and international detection programmes It finishes by covering the resulting cutting edge analytical science including current research using omics profiling for natural hormones and novel detection techniques such as IRMS This book offers readers an insight into the risk management of an important food related issue and how current analytical analyses can assist evidence based risk assessments There is comprehensive coverage of all past and current issues relating to growth promoting hormone abuse in animals Animal Hormones Julius Lee, Francis Gerald William Knowles, 1965 **Animal Hormones: a Comparative Study, part 1: Kinetic and Metabolic Hormones** P. M. Jenkin, 1962 **Animal Hormones**, 1965 Hormones and Pharmaceuticals Generated by Concentrated Animal Feeding Operations Laurence S. Shore, Amy Pruden, 2009-06-04 Hormones and Pharmaceuticals Generated by Concentrated Animal Feeding Operations Transport in Water and Soil examines how hormones antibiotics and pharmaceuticals generated from concentrated animal feeding operations CAFOs of cattle poultry swine and aquaculture are transported in water and soil Little is known of the environmental fate of the tons of physiologically active steroid hormones released each year In their own regard in the last 20 years considerable attention has been given to a wide variety of natural and anthropomorphic agents known as endocrine disrupting compounds EDCs Until the contribution of steroid hormones to the environment are better defined it will be difficult to quantify the exact impact of EDCs While some advances in the understanding of the fate of these compounds in water has been made little is known about the processes that govern their transport in soil or how they eventually reach groundwater As this book discusses extensively it is somewhat of a mystery how steroids with their lipophilic nature strong binding to humic acids and extensive metabolism by soil bacteria can be transported through even a few centimeters of soil let alone 20 to 40 meters to the groundwater With respect to antibiotics the emphasis is on their fate and transport in the environment and on the emergence of antibiotic resistant bacteria Impacts on soil ecology including the impact of antibiotics on the metabolism of other active agents is also discussed Similarly the acaricides and insecticides used in animal husbandry are widely used and their environmental pathways have been studied and have significant impacts on soil and dung ecology Active compounds with potential environmental impacts such as growth promoters generated from CAFOs are described However because little is known of their environmental fate emphasis is placed on defining the gaps in our knowledge and defining their possible effects **Animal Growth Regulation** Dennis R. Campion, Gary J. Hausman, Roy J. Martin, 2013-11-11 The biotechnological advances of recent years have put us on the brink of unprecedented gains in animal

productivity Manipulation of animal growth rate and composition of gain is now possible by a variety of techniques Examples include ingestion of beta adrenergic agonists injection of somatotropin castration immunization and gene insertion Animal Growth Regulation addresses modern concepts of growth regulation with an emphasis on agriculturally important animals This emphasis is not exclusive as many situations exist in which the only information available was generated in other species and this information has been included for the sake of clarity and completeness However because of the overall orientation of this volume particular attention has been given to the regulation of skeletal muscle adipose tissue and bone growth Certain hormones and growth factors have a profound influence on growth regulation and this basic physiological knowledge is being harnessed to manipulate growth Thus considerable emphasis has been given to growth hormone somatomedin insulinlike growth factor regulation of cell and tissue growth The involvement of peptides coded by protooncogenes and of negative growth regulators such as transforming growth factor β represents an emerging area of molecular biology wherein basic knowledge offers potential exploitation for growth manipulation Opportunities also exist for regulation of protein turnover especially from the standpoint of protein degradation Therefore a place was reserved for these topics in order to provide relevant basic knowledge
