The Doubly Green Revolution Gordon Conway, 2019-01-24 Today more than three quarters of a billion people go hungry in a world where food is plentiful A distinguished scientist here sets out an agenda for addressing this situation Initially published in 1997 in the United Kingdom the book is now available in the first edition produced for the Western hemisphere In it the author has updated information to reflect current economic indicators This volume includes a foreword written for the previous edition by Ismail Serageldin of the World Bank The original Green Revolution produced new technologies for farmers creating food abundance A second transformation of agriculture is now required specifically Gordon Conway argues a doubly green revolution that stresses conservation as well as productivity He calls for researchers and farmers to forge genuine partnerships in an effort to design better plants and animals He also urges them to develop or rediscover alternatives to inorganic fertilizers and pesticides improve soil and water management and enhance earning opportunities for the poor especially women

New Scientist and Science Journal, 1988 **Artificial Life VII** Mark A. Bedau, John S. McCaskill, Norman H. Packard, Steen Rasmussen, 2000-08-01 The term artificial life describes research into synthetic systems that possess some of the essential properties of life This interdisciplinary field includes biologists computer scientists physicists chemists geneticists and others Artificial life may be viewed as an attempt to understand high level behavior from low level rules for example how the simple interactions between ants and their environment lead to complex trail following behavior An understanding of such relationships in particular systems can suggest novel solutions to complex real world problems such as disease prevention stock market prediction and data mining on the Internet Since their inception in 1987 the Artificial Life meetings have grown from small workshops to truly international conferences reflecting the field's increasing appeal to researchers in all areas of science

The First Brain Oné R. Pagán, 2014 Planarians a class of flatworm are extraordinary they possess the remarkable ability to regenerate lost body parts including complete regeneration of the nervous system If cut into pieces each piece of the planarian can regenerate into a complete organism They are also unique among invertebrates in that they display addiction like behaviors to many drugs abused by humans Because of these distinct neurological traits the planarian is often used as an animal model in neurological research being used most recently for developments in neuropharmacology The First Brain is a discussion of how planarians have been used in neuropharmacology and what role they have played in scientific developments that have a high impact on our culture Planarians have been the animal models for research in drug addiction antidepressant development and various other topics

in biology neurobiology and even zoology Page uses these flatworms as a framework to explore the history of biological research The book provides accessible background information on how biomedical research is impacted by evolution and defines neurobiology and neuropharmacology in ways that are easy to understand At the same time Page provides enough detail for the book to be useful for scientists working in various subsections of biology The planarian has played a key role in the history biological neuropharmacological and zoological research and has even made appearances in a few unexpected places in popular culture On Page explores all these roles and shows us why the planarian truly is one of the most extraordinary and influential organisms in scientific research today

Evolutionary Theory and Human Nature Ron Vannelli, 2001-08-31 Evolutionary Theory and Human Nature is an original highly theoretical work dealing with the transition from genes to behavior using general principles of evolution especially those of sexual selection It seeks to develop a seamless transition from genes to human motivations as bio electric brain processes emotional

cognitive processes to human nature propensities various constellations of emotional cognitive forces desires and fears to species typical patterns of behavior This work covers two often antagonistic fields biology and the social sciences It should be of strong interest to anthropologists sociologists sociobiologists psychobiologists and psychologists who are interested in the question of human nature influences on social behavior

Cloning Stephen D. Fairbanks, 2004 The terms recombinant DNA technology DNA cloning molecular cloning or gene cloning all refer to the same process the transfer of a DNA fragment of interest from one organism to a self replicating genetic element such as a bacterial plasmid The DNA of interest can then be propagated in a foreign host cell This technology has been around since the 1970s and it has become a common practice in molecular biology labs today Reproductive cloning is a technology used to generate an animal that has the same nuclear DNA as another currently or previously existing animal Dolly was created by reproductive cloning technology In a process called somatic cell nuclear transfer SCNT scientists transfer genetic material from the nucleus of a donor adult cell to an egg whose nucleus and thus its genetic material has been removed The reconstructed egg containing the DNA from a donor cell must be treated with chemicals or electric current in order to stimulate cell division Once the cloned embryo reaches a suitable stage it is transferred to the uterus of a female host where it continues to develop until birth Therapeutic cloning also called embryo cloning is the production of human embryos for use in research The goal of this process is not to create cloned human beings but rather to harvest stem cells that can be used to study human development and to treat disease Stem cells are important to biomedical researchers because they can be used to generate virtually any type of specialised cell in the human body This new book presents an up to date Chronology of Cloning along with current and selected abstracts dealing with cloning as well as a guide to books on the topic Access to the abstract and books sections is provided by title subject and author indexes
