Stardust John Gribbin,Mary Gribbin,2000 Life begins with the process of star formation Except for hydrogen every single atom of every single element in our bodies has been manufactured inside stars and then scattered across the universe in great stellar explosions known as supernovas only then to be recycled as part of us The hydrogen is primordial material produced in the Big Bang but everything else has been built up in the burning hearts of stars We are made of stardust

Astrophysics with Radioactive Isotopes Roland Diehl,Dieter H. Hartmann,Nikos Prantzos,2018-10-11 Dealing with astrophysics derived from the radiation emitted by radioactive atomic nuclei this book describes the different methods used to measure cosmic radio isotopes It demonstrates how this astronomical window has contributed to the understanding of the sources and the chemical evolution of cosmic gas Reference materials and explanations are included for students in advanced stages of their education Nuclear reactions in different sites across the universe lead to the production of stable and unstable nuclei Their abundances can be measured through different methods allowing to study the various nuclear processes taking place in cosmic environments Nucleosynthesis is the cosmic formation of new nuclear species starting from hydrogen and helium resulting from the big bang origins Stars create and eject synthesized nuclei during their evolution and explosions Incorporation of the new interstellar composition into next generation stars characterises the compositional chemical evolution of cosmic gas in and between galaxies Radioactive species have unique messages about how this occurs Since the first Edition of this book published in 2011 with the title Astronomy with Radioactivities long awaited new direct observations of supernova radioactivity have been made and are now addressed in two updated chapters dealing with supernovae In this second Edition the advances of recent years beyond one dimensional treatments of stellar structure and stellar explosions towards 3 dimensional models have been included and led to significant re writings in Chapters 3 5 The sections on the Solar System origins have been re written to account for new insights into the evolution of giant molecular clouds The chapter on diffuse radioactivities now also includes material measurements of radioactivities in the current solar system and their interpretations for recent nucleosynthesis activity in our Galaxy Significant new results on gamma rays from positron annihilations have been accounted for in that chapter and led to new links with nucleosynthesis sources as well as interstellar transport processes A new chapter now provides a description of interstellar processes often called chemical evolution thus linking the creation of new nuclei to their abundance observations in gas and stars The experimental instrumental chapters on nuclear reaction measurements on gamma ray telescopes and pre solar grain laboratories have

been updated Moreover new windows of astronomy that have been opened up in recent years have been included in the discussions of the multi messenger approach that broadens the basis for astrophysical insights Beyond the Stars Ylia Callan,2025-11-03 We live in a golden age of cosmic discovery From Galileo s first telescope to the James Webb Space Telescope humanity s view of the Universe has expanded beyond imagination Beyond the Stars Astronomy in the 21st Century takes readers on a breathtaking journey through the latest frontiers of space science exploring new worlds black holes galaxies and the ultimate fate of the cosmos You ll discover how planets form and die how black holes reshape space and time how dark energy accelerates the Universe s expansion and how telescopes powered by AI and quantum technology are transforming what we can see From the icy moons of our Solar System to the search for life on distant exoplanets this book reveals the interconnected story of matter life and consciousness and humanity s unfolding role as the Universe becomes aware of itself Written for readers of all backgrounds Beyond the Stars bridges the gap between scientific insight and cosmic wonder It s both a reference and a reflection a guidebook for the 21st century sky and a meditation on what it means to be alive in a universe that continues to surprise us at every turn **WHY ANYTHING - WHY NOT NOTHING: THE GOLDBLOCKS PARAGON** Captain Robert Cowley,2019-09-24 Captain Robert Cowley walked a deserted Pacific beach it was pre dawn dark and chilly Suddenly he heard a voice Robert look up He looked up and observed the faint glow of Mars and billions of stars The voice spoke again Why anything Why not nothing Cowley an archetypal on and off believer wrote Why Anything Why Not Nothing for atheists theists scientists evolutionists and more He asks are humans the remnants of a natural big bang that coalesced into a universe or might we be the creation of a supernatural God Asking difficult questions and challenging the bounds of human reason logic and intelligence he reviews Biblical science against modern science and the limitations inherent in matter he seeks to understand how and why we are here Cowley searches for answers in the cosmos and in the supernatural philosophy of two monotheistic religions Judaism and Christianity He ponders with amazing intelligible lucidity is evolution or God responsible for life
