Maternal and Infant

Nutrition: Impact on Breast Milk, Infant Gut Microbiota and Health Development Xinran Liu, Yalin Zhou, Valeria Calcaterra , Gianvincenzo Zuccotti, 2025-11-11 This research topic focuses on the crucial role of maternal and infant nutrition in shaping health outcomes particularly through its impact on breast milk composition infant gut microbiota and long term development Maternal nutrition and health conditions during pregnancy and lactation such as gestational diabetes and micronutrient deficiencies can significantly influence the quality of breast milk and consequently the infant s early nutritional status This early nutrition including breastfeeding and the introduction of complementary foods plays a pivotal role in establishing the infant s gut microbiota A growing body of evidence suggests that early life nutrition is essential not only for immediate growth and development but also for influencing the intergenerational transmission of non communicable diseases such as obesity diabetes and cardiovascular diseases However a notable gap in current research is the lack of large scale long term studies that comprehensively examine the relationship between maternal diet early nutrition infant health and the mechanisms driving the intergenerational transmission of these diseases Furthermore the influence of cultural and socioeconomic factors on breastfeeding practices and the effectiveness of public health support policies remains insufficiently explored This research topic will fill these gaps by conducting longitudinal studies to assess the long term health effects of maternal and infant nutrition exploring the mechanisms of microbiome and metabolic pathways and focusing on maternal and infant nutrition support across diverse cultural and socioeconomic contexts This will provide the foundation

for optimizing public health policies and improving health outcomes
