Sea Cucumbers: The Sustainability of Emergent and Historical Resources Pedro M. Félix, Christopher M. Pearce, Arnold Rakaj, Ana Pombo, 2025-03-13 Sea cucumbers are echinoderms with key ecological roles in marine ecosystems They are fished worldwide as food and for their various nutraceutical and pharmacological properties Over the years poorly managed fisheries in many countries have led to overexploitation and resulted in local population declines Nonetheless sea cucumber demand shows an increasing trend and consequently fishing grounds have expanded to new regions targeting new species and aggravating the problem It is important to acknowledge that present and future stock depletion is a reality under current exploitation conditions in many countries Aquaculture can have a crucial role in supporting the conservation of natural resources through reduced fishing pressure and wild stock re seeding and thus help meet global sea cucumber demand The historic low economic relevance of sea cucumbers in new fishing regions has left a knowledge gap regarding the biological and ecological aspects of species in those regions knowledge that is crucial for stock management and for developing appropriate rearing techniques Successful approaches to the management of sea cucumbers need to incorporate robust management strategies and mitigation measures that include aquaculture options for potential restocking or for enhanced production potential All these measures need to be developed prepared and applied across diverse user groups The global status and course of sea cucumber exploitation rationalizes the need for an increase in sea cucumber R D Topics like population status demographics habitat

preferences distribution patterns growth strategies reproductive cycles and behavioural or life history traits are understudied but paramount for successful stock management and sustainable fisheries Additionally the development of sea cucumber aquaculture as an alternative to fisheries to supply international markets has led to a plethora of recent research on the subject Advances in the successful integration of deposit feeders such as sea cucumbers into rearing systems with organisms at other trophic levels in what is commonly known as Integrated Multi Trophic Aquaculture IMTA have occurred and offer the promise of more efficient and sustainable production methods All these topics require novel research approaches for the validation and application of these methodologies
