

Exploring the Periodic Table and Chemical Reactions: Questions and Answers for Ninth Grade Science Students

What is the periodic table?

1. Answer: The periodic table is a tabular arrangement of the chemical elements based on their atomic number, electron configurations, and chemical properties. It is a useful tool for predicting the properties of elements and for understanding chemical reactions.

What are valence electrons?

2. Answer: Valence electrons are the outermost electrons in an atom that participate in chemical reactions. They determine the reactivity and chemical properties of the atom.

What is an ion?

3. Answer: An ion is an atom or molecule that has a net electric charge due to the loss or gain of one or more electrons. Cations are positively charged ions, while anions are negatively charged ions.

What is a chemical reaction?

4. Answer: A chemical reaction is a process that leads to the transformation of one set of chemical substances to another. Chemical reactions involve the breaking and forming of chemical bonds between atoms, which leads to the creation of new substances with different properties.

What is the law of conservation of mass?

5. Answer: The law of conservation of mass states that the total mass of the reactants in a chemical reaction is equal to the total mass of the products. This means that matter cannot be created or
