Evolutionary Biology Pierre Pontarotti, 2009-08-25 Since 1997 scientists of different disciplines sharing a deep interest in concepts and knowledge related to evolutionary biology have held the annual Evolutionary Biology Meetings in Marseille in order to discuss their research and promote collaboration. Lately scientists especially focusing on applications have also joined the group. This book starts with the report of the 12th Evolutionary Biology Meeting which gives a general idea of the meeting's epistemological stance. This is followed by 22 chapters, a selection of the most representative contributions which are grouped under the following four themes: Part I Concepts and Knowledge, Part II Modelization, Part III Applied Evolutionary Biology, Part IV Applications in Other Fields. Part IV transcends the field of biology presenting applications of evolutionary biology in economics and astronomy.

Sirtuins in Biology and Disease Tiago F. Outeiro, Aleksey G. Kazantsev, Sirtuins comprise a family of NAD dependent enzymes that have been shown to impact longevity in a number of eukaryotic organisms. Sir2, Silent Information Regulator 2, was the first sirtuin protein discovered. The discovery that Sir2 requires NAD for its activity suggested a link between Sir2 activity and the phenomenon of caloric restriction in prolonging longevity. This link was strengthened by the observation that lifespan extension by caloric restriction requires Sir2 protein. Under conditions of caloric restriction, NAD levels are high, Sir2 is activated, and the rate of aging is decreased. These effects have been replicated in invertebrate organisms where a close structural and functional homologue of Sir2 was found in *C. elegans* and *Drosophila*. The sirtuin dependent effects on metabolism and ageing observed in lower organisms have ignited intensive investigation of their biological and therapeutic roles in mammals. There are seven known mammalian sirtuins, SIRT1-7, the most studied of which is SIRT1, a close structural and functional homologue of yeast Sir2. Enhancement of organismal longevity and other health promoting effects of mammalian SIRT1 have frequently been attributed to the regulation of metabolism. A recognized molecular link between metabolism and aging stimulated a firestorm of investigations aiming to combat metabolic and age dependent human diseases. It has become clear, however, that the sirtuin family of proteins regulates a diverse repertoire of cellular functions in mammals. Mounting evidence implicating SIRT1 in important clinical indications such as diabetes, cancer, cardiovascular dysfunction, and neurodegenerative disease suggest that SIRT1 is an attractive therapeutic target. Subsequently, drug discovery and development targeting sirtuin activation has been intensified in the recent years. Despite rapid progress and accumulation of new data, the biological roles of other mammalian sirtuins have been less studied and remain poorly understood. There are several important questions that remain to be addressed: What are the functions of sirtuins in different cell types and tissues? Are all sirtuins involved in the regulation of metabolism and aging? What is the functional relationship between different sirtuins? What are the mechanisms of regulation of sirtuin activities? What is the role of sirtuins in disease and therapy? This issue aims to address these and other critical questions relevant to Research Topic on sirtuin biology and therapeutics. To that end, the issue solicits expert opinions of sirtuin

research on structural biology biochemistry cell biology animal genetics pharmacology medicinal chemistry and drug discovery and on areas of investigation studying human conditions like diabetes cancer cardio vascular and neurodegeneration Of particular interest are the new methods and assays to study sirtuins in various organisms and developing sirtuin based therapeutics Furthermore we propose to encourage contributors to discuss new concepts and paradigms and to express their perspectives on the future development of the sirtuin research field Altogether we believe this issue provides a unique opportunity for comprehensive and diverse coverage of the topic and will be of broad interest for the journal s readership

The role of viable but non-infectious developmental forms in chlamydial biology Robert V Schoborg, Alan Paul Hudson, Jan Rupp, Andreas Pospischil, Nicole Borel, 2014-11-04 The chlamydiae are Gram negative obligate intracellular bacteria with a complex developmental cycle comprising a metabolically less active infectious stage the elementary body EB and a metabolically more active stage the reticulate body RB They are responsible for many acute and chronic diseases in humans and animals In order to play a causative role in chronic diseases chlamydiae would need to persist and to re activate within infected cells tissues for extended periods of time Persistence in vitro is defined as viable but non cultivable chlamydiae involving morphologically enlarged aberrant and nondividing RBs termed aberrant bodies AB In vitro alterations of the normal developmental cycle of chlamydiae can be induced by the addition of Interferon IFN tumor necrosis factor a TNF a and penicillin G exposure as well as amino acid or iron deprivation monocyte infection and co infection with viruses In vivo key questions include whether or not ABs occur in infected patients and animals and whether such ABs can contribute to prolonged chronic inflammation fibrosis and scarring through continuing stimulation of the host immune system known from diseases such as trachoma pelvic inflammatory disease reactive arthritis and atherosclerosis To date the direct causal role in the pathogenesis of chlamydial infection and persistence in vivo has been questioned since there was no tractable animal model of chlamydial persistence so far A very recent study was able to establish an experimental animal model of in vivo persistence when *C muridarum* vaginally infected mice were gavaged with amoxicillin Amoxicillin treatment induced *C muridarum* to enter the persistent state in vivo Recent in vivo data from patients indicate that viable but non infectious developmental stages are present in the genital tract of chronically infected women and that the gastrointestinal tract might be a reservoir for persistent chlamydial infections at other sites

Molecular and Cell Biology of Neuropsychiatric Diseases F. Owen, R. Itzhaki, 2012-12-06 The fourth volume in the Molecular and Cell Biology of Neuropsychiatric Diseases series provides a comprehensive timely review of the use of modern biological techniques in the investigation of the major neuropsychiatric diseases The scope of the book is wide and an introductory section at the beginning of each chapter enables non specialist and specialist alike to appreciate the significance of this research

Entomopathogenic Nematodes as Biological Control Agents David I. Shapiro-Ilan, Edwin E. Lewis, 2024-09-23 Entomopathogenic nematodes EPNs are biocontrol agents that are used to control a wide variety of insect pests within

agriculture and forestry In addition to their use as bio pesticides EPNs have a fascinating biology and are thus considered model organisms in ecology symbiosis and pathogenesis This book presents basic knowledge and diverse applications to illustrate how EPNs play an important role as potent biocontrol solutions This book is a must have for all pest management professionals including those practicing integrated pest management strategies **Cold Spring Harbor Symposia on Quantitative Biology**; ,1985 **Handbook of the Biology of Aging** Nicolas Musi,Peter Hornsby,2021-01-19 Handbook of the Biology of Aging Ninth Edition provides a comprehensive synthesis and review of the latest and most important advances and themes in modern biogerontology The book focuses on the trend of big data approaches in the biological sciences presenting new strategies to analyze interpret and understand the enormous amounts of information being generated through DNA sequencing transcriptomic proteomic and metabolomics methodologies applied to aging related problems Sections cover longevity pathways and interventions that modulate aging innovative tools that facilitate systems level approaches to aging research the mTOR pathway and its importance in age related phenotypes and much more Assists researchers in keeping abreast of research and clinical findings outside their subdiscipline Helps medical behavioral and social gerontologists understand what basic scientists and clinicians are discovering Includes new chapters on genetics evolutionary biology bone aging and epigenetic control Examines the diverse research being conducted in the study of the biology of aging **Sirtuin Biology in Cancer and Metabolic Disease** Kenneth Maiese,2021-02-20 Sirtuin Biology in Cancer and Metabolic Disease Cellular Pathways for Clinical Discovery offers a compelling and thought provoking perspective for the examination of the intriguing biology of sirtuins that ties cancer and metabolic disease together and provides a critical platform for the development of sirtuin based novel therapeutic strategies to effectively treat cancer and metabolic disorders with precision in order to minimize any potentially detrimental clinical outcomes An exciting prospect for the development of innovative therapeutics for cancer and metabolic disorders involves sirtuins Sirtuins are histone deacetylases that have an intricate role in the onset and development of cancer and metabolic disease Implementing a translational medicine format this innovative reference highlights the ability of sirtuins to oversee critical pathways that involve stem cell maintenance cellular proliferation metabolic homeostasis apoptosis and autophagy that can impact cellular dysfunction and unchecked cellular growth that can occur during cancer and metabolic disease Each chapter offers an intuitive perspective of advances on the application of sirtuin pathways for cancer and metabolic disease that will become a go to resource for a broad audience of scientists physicians pharmaceutical industry experts nutritionists and students Chapters are authored by internationally recognized experts who elucidate the intimate relationship between cancer and metabolic disease that intersects with sirtuin pathways Presents the basic and clinical role of sirtuins in regard to cancer and metabolic disease Summarizes the multidiscipline views and publications for this exciting field of sirtuins for the development of new clinical treatments for cancer and metabolic disease Provides a vital foundation for a broad audience of

healthcare providers scientists drug developers and students in both clinical and research settings Eye Diseases

Salvatore Di Lauro,Sara Crespo Millas,David Galarreta Mira,2023-02-08 In this volume the reader will find a wide range of extended review chapters from international experts in the field of eye disease interesting discussions from the field about frequently forgotten diseases and original research chapters with interesting new ideas about the future of ophthalmology

Sirtuins Riekelt H. Houtkooper,2016-11-17 The sirtuin family of proteins SIRT1 7 received a lot of attention in recent years as they serve as metabolic sensors that control not only metabolism but also aging and lifespan regulation As such sirtuins are strong targets for the treatment of age related metabolic diseases including obesity diabetes and cancer Indeed many research groups as well as pharmaceutical companies discovered food components and or drugs that target the sirtuins and provide significant health benefits This book focuses on various aspects of sirtuin biology from basic biochemistry via molecular function to its role in fighting human disease
