Ten Years of Concurrency Semantics Jacobus Willem Bakker, J. J. M. M. Rutten, Amsterdam Concurrency Group, 1992 This collection of reprints describes a unified treatment of semantics covering a wide range of notions in parallel languages Included are several foundational and introductory papers developing the methodology of metric semantics studies on the comparative semantics of parallel object oriented and logic programming and papers on full abstraction and transition system specifications In addition links with process algebra and the theory of domain equations are established Throughout a uniform proof technique is used to relate operational and denotational models The approach is flexible in that both linear time branching time or bisimulation and intermediate models can be handled as well as schematic and interpreted elementary actions The reprints are preceded by an extensive introduction surveying related work on metric semantics

Philosophy and Computing Thomas M. Powers, 2017-10-26 This book

features papers from CEPE IACAP 2015 a joint international conference focused on the philosophy of computing Inside readers will discover essays that explore current issues in epistemology philosophy of mind logic and philosophy of science from the lens of computation Coverage also examines applied issues related to ethical social and political interest The contributors first explore how computation has changed philosophical inquiry Computers are now capable of joining humans in exploring foundational issues Thus we can ponder machine generated explanation thought agency and other quite fascinating concepts The papers are also concerned with normative aspects of the computer and information technology revolution They examine technology specific analyses of key challenges from Big Data to autonomous robots to expert systems for infrastructure control and financial services The virtue of a collection that ranges over philosophical questions such as this one does lies in the prospects for a more integrated understanding of issues These are early days in the partnership between philosophy and information technology Philosophers and researchers are still sorting out many foundational issues They will need to deploy all of the tools of philosophy to establish this foundation This volume admirably showcases those tools in the hands of some excellent scholars

Cognitive Neuropsychological Approaches to Spoken Word Production Lyndsey Nickels, 2002 The papers in this volume all examine the nature of spoken word production in aphasia and how this can inform current theories of language processing It comprises 7 papers by some of the foremost researchers in the field The first paper in the volume is an introduction by the editor Dr Lyndsey Nickels which reviews the state of the art of the cognitive neuropsychology of spoken word production both in terms of theory and methodology The individual papers address a range of topical issues including the levels of processing in speech production Lambon Ralph Moriarty Sage et al Wilshire the nature of the interaction between levels of processing Goldrick and effects of different factors on naming word class and context Berndt Burton Haendiges phonemic and orthographic cues Best Herbert Hickin Osborne lexical stress Howard Smith Taken together this volume provides the reader with an insight into the cutting edge of research in spoken word production *Semantics* James R. Hurford, Brendan Heasley, 1983-04-28 Introduces the major elements of semantics in a simple step by step fashion Sections of explanation and examples are followed by practice exercises with answers and comment provided *Semantic Knowledge and Semantic Representations* Rosaleen A. McCarthy, 1995 What is the basis of our ability to assign meanings to words or to objects Such questions have until recently been regarded as lying within the province of philosophy and linguistics rather than psychology However recent advances in psychology and neuropsychology have led to the development of a scientific approach to analysing the cognitive bases of semantic knowledge and semantic representations Indeed theory and data on the organisation and structure of semantic knowledge have now become central and hotly debated topics in contemporary psychology This special issue of Memory brings together a series of papers from established laboratories that are at the forefront of semantic memory research The collection includes papers presenting theoretical overviews of the field as well as papers containing new experimental findings A variety of approaches to the problems of analysing semantic knowledge and semantic representations are included in this volume For example experimental studies of normal subjects are included together with neuropsychological investigations of patients with impaired semantic memory and computational models of the representation of knowledge in normality and disease This collection will therefore be essential reading for researchers and others who are interested in memory function It will also be of interest to cognitive scientists linguists philosophers and others who have puzzled over the many complex and central questions that probe the roots of our ability to understand meaning **"Journal of Education Culture and Society" 2014 no1** Aleksander Kobylarek, Jacek
