Handbook are concerned with a social political and cultural dimensions in mathematics education b mathematics education
as a field of study c technology in the mathematics curriculum and d international perspectives on mathematics education
These themes are taken up by 84 internationally recognized scholars based in 26 different nations Each of section is
structured on the basis of past present and future aspects The first chapter in a section provides historical perspectives How
did we get to where we are now the middle chapters in a section analyze present day key issues and themes Where are we
now and what recent events have been especially significant and the final chapter in a section reflects on policy matters
Where are we going and what should we do Readership Teachers mathematics educators ed policy makers mathematicians

Mathematical Society American Mathematical Society,1987 **Topological Quantum Computation** Zhenghan
Wang,2010 Topological quantum computation is a computational paradigm based on topological phases of matter which are
governed by topological quantum field theories In this approach information is stored in the lowest energy states of many
anyon systems and processed by braiding non abelian anyons The computational answer is accessed by bringing anyons
together and observing the result Besides its theoretical esthetic appeal the practical merit of the topological approach lies in
its error minimizing hypothetical hardware topological phases of matter are fault avoiding or deaf to most local noises and
unitary gates are implemented with exponential accuracy Experimental realizations are pursued in systems such as fractional
quantum Hall liquids and topological insulators This book expands on the author s CBMS lectures on knots and topological
quantum computing and is intended as a primer for mathematically inclined graduate students With an emphasis on
introducing basic notions and current research this book gives the first coherent account of the field covering a wide range of
topics Temperley Lieb Jones theory the quantum circuit model ribbon fusion category theory topological quantum field theory
anyon theory additive approximation of the Jones polynomial anyonic quantum computing models and mathematical models
