Science as Natural Philosophy and Finding Our Place in the Universe Richard L. Summers, 2023-11-21 The Scientific Revolution began with the publication of Copernicus heliocentric theory describing the Sun as the center of our solar system and all the known Universe That revolutionary idea began a rethinking of our place in the Universe and no longer were the affairs of humanity considered as the centerpiece of all that was known In the past century with the advent of the theories of Special and General Relativity the Copenhagen interpretation of quantum theory and a more sophisticated conception of living system dynamics there has been a new understanding of the central role of the observer or experimenter in the determination of natural phenomena and the actualization of reality Modern advancements in information theory semiotics and consciousness studies have also led to a better comprehension of the relationship between 1st person and 3rd person perspectives and the limits of the Scientific Method Science and religion have always had the common goal of trying to further our understanding of the world and its meaning for us This book explores a possible return of science to a role as natural philosophy and a pathway to better understanding our place in the Universe
