Invasive and Introduced Plants and Animals Ian D.

Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate

contemporary public affairs involves many different centres of social power engaged in complex and mutable relations ranging from willing cooperation to competition to out and out conflict This book emphasises the role played in these relations by political institutions in particular Generally these claim a special competence to authorise and regulate the activities of other institutions but their claim is often contested by other power centres serving different and sometimes contrasting interests To explore those processes the author after identifying the nature of the political considers its dealings with other forms of social power Among these economic power gets particular attention in view of the contemporary salience of the state vs market issue But this book also considers the relations between politics at one end and law the public sphere citizenship and religion at the other **Excerpta botanica** ,1992 **A Companion to the Action Film** James

challenge of reversing the degradation of ecosystems while meeting increasing demands for their services can be met only with significant policy and institutional changes. However, a difficult set of obstacles stand in the way. Policy makers must keep in mind that there are both trade offs and synergies between human well being, ecosystems, and ecosystem services, and that decisions regarding these tradeoffs are difficult and often contentious. The Responses volume ultimately establishes which policy options have the greatest chance to overcome the obstacles and generate positive outcomes. It will serve as an invaluable guide to the creation of stronger policy frameworks for the future.
