

■ FUEL SYSTEM

1. General

- The 1UR-FSE engine adopts a D-4S (Direct injection 4-stroke gasoline engine Superior version) system which has both direct and port types of injectors. This system optimally controls the injectors for direct injection and port injection according to engine load. The system achieves improved engine performance, fuel economy, and clean emissions.
- A fuel returnless system, which controls the fuel pressure for the low pressure part of the fuel system using a pressure regulator installed in the fuel tank, is used. However, the unused fuel from the high-pressure fuel pump and the fuel from the relief valve return to the fuel tank.
- A fuel cut control is used to stop the fuel pump (for low pressure) when an SRS airbag is deployed in a frontal, side, or rear side collision. For details, [see page EG-97](#).
- In order to ensure excellent serviceability, quick connectors are used to connect the fuel pipe to the fuel hose.
- High-pressure injectors with double slit nozzles are used for direct injection.
- An evaporative emission control system is used. For details, [see page EG-104](#).
