Islands in the Cosmos Dale A. Russell, 2009-07-14 How is it that we came to be here The search for answers to that question has preoccupied humans for millennia Scientists have sought clues in the genes of living things in the physical environments of Earth from mountaintops to the depths of the ocean in the chemistry of this world and those nearby in the tiniest particles of matter and in the deepest reaches of space In *Islands of the Cosmos* Dale A Russell traces a path from the dawn of the universe to speculations about our future on this planet He centers his story on the physical and biological processes in evolution which interact to favor more successful and eliminate less successful forms of life Marvelously these processes reveal latent possibilities in life's basic structure and propel a major evolutionary theme the increasing proficiency of biological function It remains to be seen whether the human form can survive the dynamic processes that brought it into existence Yet the emergence of the ability to acquire knowledge from experience to optimize behavior to conceptualize to distinguish good from bad behavior all hint at an evolutionary outcome
