

Question 1: Water at 20°C falls from a height of 854 m. If the whole energy is used in increasing the temperature, find out the final temperature.
Specific heat of water is 4200 J/K kg .

Given that

$$T_1 = 20^{\circ}\text{C} = 20 + 273 = 293 \text{ K}$$

$$\text{height} = h = 854 \text{ m}$$

$$\text{Specific heat of water} = 4200 \text{ J K}^{-1} \text{ kg}^{-1}$$

$$\text{Final temperature} = T_2 = ?$$

$$\text{P.E} = mgh \quad \text{--- (1)}$$

Solution:

We know that

$$\Delta Q = cm \Delta T \quad \text{--- (2)}$$

Whole energy is used in increasing the temperature (Given)

$$\Delta Q = \text{P.E}$$

From (1) and (2)

$$cm \Delta T = mgh$$

$$c \Delta T = gh$$

$$c (T_2 - T_1) = gh$$

$$T_2 - T_1 = \frac{gh}{c}$$

$$T_2 = \frac{gh}{c} + T_1$$

$$= \frac{9.8 \times 854}{4200} + 293$$

$$= \frac{8369.2}{4200} + 293 = 1.99 + 293$$

$$T_2 = 294.99 \text{ K} = 295 - 273^{\circ}\text{C}$$

$$T_2 = 22^{\circ}\text{C}$$

Theory of Nonequilibrium Ensembles, Irreversible Thermodynamics, and Generalized Hydrodynamics Byung Chan Eu, 2016-08-02 This book presents the fundamentals of irreversible thermodynamics for nonlinear transport processes in gases and liquids as well as for generalized hydrodynamics extending the classical hydrodynamics of Navier Stokes Fourier and Fick Together with its companion volume on relativistic theories it provides a comprehensive picture of the kinetic theory formulated from the viewpoint of nonequilibrium ensembles in both nonrelativistic and in Vol 2 relativistic contexts Theories of macroscopic irreversible processes must strictly conform to the thermodynamic laws at every step and in all approximations that enter their derivation from the mechanical principles Upholding this as the inviolable tenet the author develops theories of irreversible transport processes in fluids gases or liquids on the basis of irreversible kinetic equations satisfying the H theorem They apply regardless of whether the processes are near to or far removed from equilibrium or whether they are linear or nonlinear with respect to macroscopic fluxes or thermodynamic forces Both irreversible Boltzmann and generalized Boltzmann equations are used for deriving theories of irreversible transport equations and generalized hydrodynamic equations which rigorously conform to the tenet All observables described by the so formulated theories therefore also strictly obey the tenet *Chemical Thermodynamics For Metals And Materials (With Cd-rom For Computer-aided Learning)* Hae-geon Lee, 1999-10-13 A number of thermodynamic books claiming to be original in both presentation and approach have been published However thermodynamics is still a confusing subject for uninitiated students and an easy to forget one for graduate engineers In order to solve these problems this computer aided learning package textbook and CD ROM takes a new approach This package is unique and beneficial in that it simulates a classroom lecture it actually writes important equations and concepts on a virtual board underlines draws circles places ticks to emphasise important points draws arrows to indicate relationships uses colours for visual effect erases some parts to write new lines and even repeats some parts of the lesson to stress their importance This realistic simulation is made possible by the employment of the multimedia capabilities of the modern day computer Readers are not just passively presented with thermodynamics they can also interactively select and repeat any particular topic of interest as many times as they want This flexibility allows readers to choose their own pace of presentation This complementary set is in many important respects better than the books that are currently available on the subject **Analytical Thermodynamics** Dongqing Li, 2024-12-07 This second edition presents an enriched and expanded exploration of the fundamental principles of thermodynamics tailored for graduate level studies Drawing on over three decades of academic teaching experience the author has refined the content making it more accessible and comprehensive Chapter 1 has been restructured for clarity delineating Legendre Transformation and Thermodynamic Potentials into separate sections while the treatment of Chemical Potentials has been significantly augmented encompassing two component ideal gas mixtures and a re derivation of chemical potentials for dilute solutions Additionally the section on thermodynamic stability now boasts enhanced explanations and illustrative figures

Chapter 2 introduces a groundbreaking section Electrolyte Solution in Electric Field as a Non Uniform System providing fresh insights into unexplored realms Chapter 3 now enriched with several new sections delves into topics such as Contact Angles on Heterogeneous Surfaces and Rough Surfaces Elastic Liquid Fluid Interface Curvature Effect on Surface Tension Solute Effect on Equilibrium Pressure and Heterogeneous Bubble Nucleation in a Dilute Solution Chapter 4 features new elucidations and discussions aimed at bolstering comprehension while the entirely new Chapter 5 offers solutions to selected homework and exam questions adding a practical dimension to the theoretical framework This edition encompassing approximately 50% new content expands the book by 131 pages rendering it an even more invaluable resource for professors instructing advanced thermodynamics and graduate students delving into this intricate subject matter
