

C. How does oxygen production relate to the rate of photosynthesis?

Less Oxygen Production
Photosynthesis proceeds slowly.

Activity A:

Ideal conditions

Get the Gizmo ready:

- Be sure that the BAR CHART tab is selected.
- Turn on **Show numerical values**.

Question: In the Gizmo, what are the ideal conditions for photosynthesis?

1. **Form hypothesis:** During photosynthesis, light energy is used to synthesize carbon dioxide (CO_2) and water (H_2O) into glucose ($\text{C}_6\text{H}_{12}\text{O}_6$) and oxygen (O_2). The complex series of chemical reactions is summarized by the following formula:

In the Gizmo, what light intensity and CO_2 level do you think will maximize the rate of photosynthesis?

Light Intensity - 37% CO_2 - 1000

2. **Experiment:** Use the Gizmo to find the ideal conditions for photosynthesis. Use any method you like. When you think you have the answer, list the conditions below.

Temperature	Light intensity	CO_2 level	Oxygen production
24.0	81	1000	51.9

3. **Revise and repeat:** One way to test if you've found the ideal conditions is to change each variable slightly from the value that you recorded above. If the oxygen production decreases with each change that you make, it is likely you have found the ideal conditions. If a small change causes oxygen production to increase, continue to experiment.

If necessary, revise your numbers in the table above.

4. **Think and discuss:** Think about the process of finding the ideal conditions

A. Why would it be hard to find the ideal light intensity if the temperature were very hot or cold?

No matter how bright the light was, you would produce very little oxygen regardless of how hot or cold it was.

B. Why would it be hard to find the ideal CO_2 level if the light intensity were very low?

Because if the light intensity was low, little oxygen would be produced, regardless of how high or low you set the CO_2 level.

Answer Key To Why Study Photosynthesis:

, *Plants (eBook)* Edward P. Ortleb, Richard Cadice, 1986-09-01 This book presents a program of basic studies focusing on green plants. Students will study and compare algae, mosses, ferns, and seed plants. Each of the twelve teaching units in this book is introduced by a color transparency print, books, or PowerPoint slide eBooks that emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

Handbook of Photosynthesis Mohammad Pessarakli, 2005-03-29 Quite naturally, photosynthesis has achieved massive amounts of attention in recent years. Aside from being the most spectacular physiological process in plant growth, it is actually the key to our dealing with the potentially cataclysmic accumulation of carbon dioxide in the earth's atmosphere. Unfortunately, while information is plentiful, all this attention has resulted in a scattered database on photosynthesis with no contemporary starting point at least until now. With the second edition of the *Handbook of Photosynthesis*, Mohammad Pessarakli once again fills the need for an authoritative and balanced resource by assembling a team of experts from across the globe. Together they have created a comprehensive reference that in a single volume includes important background information as well as the most recent research findings on photosynthesis. Completely revised with several new chapters, the handbook is a completely updated reworking of the critically acclaimed first edition. Details all of the photosynthetic factors and processes under both normal and stressful conditions, covering lower and higher plants as well as related biochemistry and plant molecular biology. Divided into fourteen sections for ease of reference, with nearly 8000 bibliographic citations, the handbook contains authoritative contributions from over 80 scientists. It includes approximately 500 drawings, photographs, tables, and equations, all designed to reinforce and clarify important text material.
