Advances in Multimedia Information Systems K. Selçuk Candan, Augusto Celentano, 2005-10-26 This volume collects the proceedings of the 11th International Workshop on Multimedia Information Systems MIS 2005 which was held during September 19-21 2005 in the beautiful town of Sorrento Italy. The MIS series of workshops started in 1995 with the aim of fostering interdisciplinary discussions and research in all aspects of multimedia information systems in all their diversity. Since then in MIS workshops issues ranging from fundamental multimedia information management research to advanced applications in multimedia systems related fields have been discussed. New systems have been reported and the lessons learned have provided new insights into this dynamic and exciting area of computer science and engineering. As the program chairs of the MIS 2005 workshop we note that while designing an effective multimedia system two complementary issues have to be taken into account: a) the need to use appropriate technologies in acquiring, processing and delivering multimedia data which manifest themselves under very different shapes and b) the need for modeling, indexing, querying, retrieving, mining and visualizing data under different system and device capabilities for different users. Therefore, besides the development of more traditional content management technologies, there are emerging needs to gather media from sensing devices in the environmental context for informed processing of media based on the current task and resources and for making the results available to the user in the most suitable form based on the capabilities and preferences of the user.

Delivering Health Care in America Leiyu Shi, Douglas A.
