Seinfeld, Spyros N. Pandis, 2012-12-18 Thoroughly restructured and updated with new findings and new features The Second Edition of this internationally acclaimed text

presents the latest developments in atmospheric science. It continues to be the premier text for both a rigorous and a complete treatment of the chemistry of the atmosphere covering such pivotal topics as Chemistry of the stratosphere and troposphere, Formation, growth, dynamics and properties of aerosols, Meteorology of air pollution, Transport, diffusion and removal of species in the atmosphere, Formation and chemistry of clouds, Interaction of atmospheric chemistry and climate, Radiative and climatic effects of gases and particles, Formulation of mathematical chemical transport models of the atmosphere. All chapters develop results based on fundamental principles enabling the reader to build a solid understanding of the science underlying atmospheric processes. Among the new material are three new chapters: Atmospheric Radiation and Photochemistry, General Circulation of the Atmosphere and Global Cycles. In addition, the chapters Stratospheric Chemistry, Tropospheric Chemistry and Organic Atmospheric Aerosols have been rewritten to reflect the latest findings. Readers familiar with the First Edition will discover a text with new structures and new features that greatly aid learning. Many examples are set off in the text to help readers work through the application of concepts. Advanced material has been moved to appendices. Finally, many new problems coded by degree of difficulty have been added. A solutions manual is available. Method for Calculation of Laminar Heat Transfer in Air Flow Around Cylinders of Arbitrary Cross Section (including Large Temperature Differences and Transpiration Cooling) Dwight G. Moore, E. R. G. Eckert, H. S. Ribner, Herbert F. Hardrath, John D. Stanitz, Max. A. Heaslet, Simon Ostrach, United States.

National Advisory Committee for Aeronautics, 1953
Principles Of Heating, Ventilation And Air Conditioning With Worked Examples Nihal E. Wijesundera, 2015-11-25. This book presents the most current design procedures in heating, ventilation and air conditioning (HVAC) available in handbooks like the ASHRAE American Society of Heating, Refrigeration and Air Conditioning Engineers Handbook 2013 Fundamentals in a way that is easier for students to understand. Every effort is made to explain in detail the fundamental physical principles that form the basis of the various design procedures. A novel feature of the book is the inclusion of about 15 worked examples in each chapter, carefully chosen to highlight the diverse aspects of HVAC design. The solutions for the worked examples clarify the physical principles behind the design method. In addition, there are problems at the end of each chapter for which numerical answers are provided. The book includes a series of MATLAB programs that may be used to solve realistic HVAC design problems which in general require extensive and repetitive calculations. Supplementary materials are available upon request for all instructors who adopt this book as a course text. Please send your request to sales@wspc.com
