

Anatomy & Physiology I

Joints

1. What are the 2 major functions of joints?

- *to bind bones together*
- *to permit movement*

2. List 3 criteria used to classify joints:

- *the type of material binding the bones*
- *whether or not a joint cavity is present*
- *how much movement is permitted*

3. For each of the structural joint categories, give the most common functional classification and describe the degree of movement permitted

Fibrous: *synarthrosis, immovable*

Cartilaginous: *amphiarthrosis, slightly moveable*

Synovial: *diarthrosis, freely moveable*

4. What structural joint is NOT commonly found in the axial skeleton and why?

Synovial joints are not usually found in the axial skeleton. The synovial joints are ideal for locations where mobility and flexibility are needed. Most joints of the axial skeleton have very little to no mobility because the bones of the skeleton typically function to protect or support the internal organs.

5. Identify the following structures the diagram of a typical synovial joint.

- _____ **C** _____ Articular Cartilage
- _____ **A** _____ Synovial Membrane
- _____ **D** _____ Fibrous Capsule
- _____ **B** _____ Joint Cavity
