- 10) Are particles in the solid state still moving? If so, how would you describe that movement?

Particles in the solid state are still moving, but only very slightly. The movement appears more like a vibration.

- 11) What happens to the behavior gas particles when more and more heat is added?

As more heat is added to particles in the gas state, their movement becomes more disorderly and energetic. They bounce even more quickly against the container.

- 12) What is the most notable difference between particles in the solid phase and the liquid phase?

Particles in the liquid phase contain more energy from heat. This causes the particles to spread out more and spin more quickly than particles in the solid state.

Handbook on Personalized Learning for States, Districts, and Schools Marilyn Murphy, Sam Redding, Janet Twyman, 2016-07-01 The recent passage of the Every Student Succeeds Act (ESSA) presents new opportunities and greater flexibility in efforts to personalize learning for all children. The Handbook on Personalized Learning for States, Districts, and Schools provides insight and guidance on maximizing that new flexibility. Produced by the Center on Innovations in Learning (CIL), one of seven national content centers funded by the U.S. Department of Education, this volume suggests how teachers can enhance personalized learning by cultivating relationships with students and their families to better understand a child's learning and motivation. Personalized learning also encourages the development of students' metacognitive, social, and emotional competencies, thereby fostering students' self-direction in their own education, one aimed at mastery of knowledge and skills and readiness for career and college. Chapters address topics across the landscape of personalized learning, including co-designing instruction and learning pathways with students, variation in the time, place, and pace of learning, including flipped and blended classrooms, and using technology to manage
