Medicare Andy Lazris,2016-06-14 Andy Lazris MD is a practicing primary care physician who experiences the effects of Medicare policy on a daily basis As a result he believes that the way we care for our elderly has taken a wrong turn and that Medicare is complicit in creating the very problems it seeks to solve Aging is not a disease to be cured it is a life stage to be lived Lazris argues that aggressive treatments cannot change that fact but only get in the way and decrease quality of life Unfortunately Medicare s payment structure and rules deprive the elderly of the chance to pursue less aggressive care which often yields the most humane and effective results Medicare encourages and will pay more readily for hospitalization than for palliative and home care It encourages and pays for high tech assaults on disease rather than for the primary care that can make a real difference in the lives of the elderly Lazris offers straightforward solutions to ensure Medicare s solvency through sensible cost effective plans that do not restrict patient choice or negate the doctor patient relationship Using both data and personal stories he shows how Medicare needs to change in structure and purpose as the population ages the physician pool becomes more specialized and new medical technology becomes available Curing Medicare demonstrates which medical interventions medicines tests procedures work and which can be harmful in many common conditions in the elderly the harms and benefits of hospitalization the current culture of long term care and how Medicare often promotes care that is ineffective expensive and contrary to what many elderly patients and their families really want **Mobile**

Integrated Healthcare MedStar Mobile Healthcare,Medstar Mobile Healthcare,2016 The healthcare landscape in the United States is evolving rapidly but has largely ignored EMS until recently As the country focuses on cost containment and more appropriate methods to deliver services as a result of healthcare reform EMS will need to undergo dramatic change to fill a new role in the healthcare system The current traditional delivery method for EMS is financially unsustainable and will soon not be a viable option for care EMS has a choice to make adapt to the new environment or be left behind A viable alternative to the current structure of EMS is Mobile Integrated Healthcare MIH community based health management that is fully integrated with the overall health system Various programs like this have appeared across the United States but a definitive resource that describes how to successfully implement such a program has not been available Mobile Integrated Healthcare Approach to Implementation fills this void by serving as a reference not only to the EMS community but also to other medical professionals working toward implementation of a successful MIH program Mobile Integrated Healthcare Approach to Implementation provides a step by step approach for the identification of community needs forming the appropriate partnerships selection of staff acquiring resources patient identification and overcoming hurdles to a successful program Examples from successful programs across the country are included The author team of Mobile Integrated Healthcare Approach to Implementation has developed and implemented a functioning successful program Their experiences with community partners and other healthcare specialists provide a broad based view of the future of EMS in the healthcare industry Mobile Integrated Healthcare Approach to Implementation is written by leaders in the field of EMS who are

committed to guiding the successful evolution of EMS Their approach to integration should be considered by EMS management hospital based social workers and community partners such as county health authorities homeless coalitions and psychiatric services The type of care EMS providers give needs to evolve with the changing landscape of healthcare This text describes how healthcare professionals and community partners can work together to facilitate that change and define a successful MIH program

Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05

Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any

one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
