Chapter 14 Elements of a Quality 4.0 Strategy Chapter 15 Playbook for Transformation **Semantic IoT: Theory and Applications** Rajiv Pandey, Marcin Paprzycki, Nidhi Srivastava, Subhash Bhalla, Katarzyna

Wasielewska-Michniewska, 2021-04-12 This book is focused on an emerging area i.e. combination of IoT and semantic technologies which should enable breaking the silos of local and/or domain specific IoT deployments. Taking into account the way that IoT ecosystems are realized, several challenges can be identified. Among them of definite importance are this list is obviously not exhaustive i) How to provide common representation and/or shared understanding of data that will enable analysis across systematically growing ecosystems ii) How to build ecosystems based on data flows iii) How to track data provenance iv) How to ensure/manage trust v) How to search for things/data within ecosystems vi) How to store data and assure its quality. Semantic technologies are often considered among the possible ways of addressing these and other related questions. More precisely in academic research and in industrial practice semantic technologies materialize in the following contexts: this list is also not exhaustive but indicates the breadth of scope of semantic technology usability i) representation of artefacts in IoT ecosystems and IoT networks ii) providing interoperability between heterogeneous IoT artefacts iii) representation of provenance information enabling provenance tracking, trust establishment and quality assessment iv) semantic search enabling flexible access to data originating in different places across the ecosystem v) flexible storage of heterogeneous data. Finally, Semantic Web, Web of Things and Linked Open Data are architectural paradigms with which the aforementioned solutions are to be integrated to provide production-ready deployments. In addition, the book also uniquely details the role of the military in the domain of vehicle automation. This all ensures the book is of great interest to historians of technology, practitioners in engineering disciplines, scholars working in mobility studies, journalists and political decision makers. *Quality Planning and Assurance* Herman Tang, 2021-11-23
