(2019 to 2004) 3rd Edition Disha Experts,2020-01-04 **Exploring Third-Party Logistics and Partnering in Construction** Andreas Ekeskär,2016-06-01 The construction industry is associated with problems such as low productivity and high costs This has been highlighted in several government funded reports in both Sweden and in the UK during the course of over two decades The construction industry is a large industry sector employing hundreds of thousands and a large contributor to a country s GDP The problems therefore have a large impact on society Some of the problems are rooted in the organizational structure of the construction industry Compared to other manufacturing industries the construction industry is organized in temporary organizations The temporary organizations cause temporary supply chains fragmentation among construction industry actors and adversarial relationships between those actors Partnering has been put forward as a solution to overcome the temporariness and the adversarial relationships in the construction Another solution to mitigate the problems suggested in the reports is supply chain management SCM Both concepts have been taken from the manufacturing industries and partnering has been more successful compared to SCM in the construction industry In the construction industry the progress towards SCM has focused on logistics In recent years dedicated third party logistics TPL solutions have emerged in the Swedish construction industry where a company is hired to manage the logistics in a construction project The purpose with the research presented in this licentiate thesis is to explore how client initiated TPL solutions and partnering can be facilitators for SCM in the construction industry Being a new phenomenon in the construction industry TPL solutions provide a logistical competence not necessarily included in a traditional construction project Therefore TPL solutions are of particular interest when studying the realization of SCM in the construction industry In the process of realizing SCM in the construction industry the construction clients have been put forward as having a crucial and important role The clients are the initiator and funder of construction projects and as such the client can influence the course of a construction project Therefore it is of interest to study how the client can take an active role in this process Initiating a TPL solution in a

construction project is one way for a client to take an active part in the realization of SCM in construction. However, in order to study how clients can take an active role towards the realization of SCM in the construction industry, there have to be an understanding of how SCM is to be adopted to the construction industry context. SCM that derives from the manufacturing industry is designed to be used in long term relationships with permanent organizational structures. The construction industry, on the other hand, is associated with short term relationships and a temporary organizational structure. Partnering that is designed to mitigate the temporariness and establish long term relationships have been quite successful in the construction industry and could therefore be used as a facilitator for SCM in construction. To study the use of client initiated TPL solutions in construction and the realization of SCM in the construction industry, the following research questions have been addressed: RQ1 To what extent can a third party logistics solution be a facilitator for client driven SCM in the construction industry? RQ2 How will upstream and downstream tiers be affected when a thirdparty logistics provider is used in a construction project? RQ3 How can partnering be used as a mean to facilitate the realization of SCM in the construction industry? To answer the research questions, two main methodologies have been used: case study for the empirically grounded research and conceptual studies for the analysis of the case studies as well as for comparing the two concepts of partnering and SCM. All questions have been grounded in literature and previous research. The findings of this research are therefore grounded in both theory and in practice. The main findings of this research are that TPL solutions are not a quick fix for realizing SCM in the construction industry. However, if used right, a TPL solution can be an effective tool to address logistical issues in a construction project and to establish an interface between the supply chain and the construction site. By initiating a TPL solution, the client addresses the importance of logistical competence in a construction project. A TPL solution does not have a purpose of its own; a TPL solution is a service function to the construction project providing expertise on logistics management. There are also a number of driving forces and concerns that have been identified; if they are addressed prior to a TPL solution is implemented, the likelihood of its success will increase. Furthermore, both partnering and SCM rely on high trust and share several key components and issues that have to be addressed. Partnering on strategic level with several suppliers included can even be hard to distinguish from SCM. Wherefore, partnering is considered a facilitator for the realization of SCM in construction. By addressing the necessary issues in both concepts, a good foundation for SCM is established.
