11011

b) $10010110 - 101100$

1101010

c) $10100 \div 100$

00101

d) $010001010000 + 010000010111$ in BDC format

$450 + 417 = 867$ --- also you can add in binary and then convert result to BCD

e) the standard form of expression $(A + B' + C) (B' + C + D')$

the missing variable in the term $(A + B' + C) = D$ or D' , so add DD' to the term =

$(A + B' + C + D) (A + B' + C + D')$

the missing variable in the term $(B' + C + D')$ is A or A' , so add AA' to the term =

$(B' + C + D' + A) (B' + C + D' + A')$

So the standard form =

$(A + B' + C + D) (A + B' + C + D') (B' + C + D' + A) (B' + C + D' + A')$

Anaphora and Type Logical Grammar Gerhard Jäger, 2005-12-08

Type Logical Grammar is a framework that emerged from the synthesis of two traditions: Categorical Grammar from formal linguistics and substructural logics from logic. Grammatical composition is conceived as resource-conscious logical deduction. Such a grammar is necessarily surface-oriented and lexicalistic. The Curry-Howard correspondence supplies an elegant compositional mapping from syntax to semantics. Anaphora does not seem to fit well into this framework. In type logical deductions, each resource is used exactly once. Anaphora, however, is a phenomenon where semantic resources are used more than once. Generally, admitting the multiple use of lexical resources is not possible because it would lead to empirical inadequacy and computational intractability. This book develops a hybrid architecture that allows to incorporate anaphora resolution into grammatical deduction while avoiding these consequences. To this end, the grammar logic is enriched with a connective that specifically deals with anaphora. After giving a self-contained introduction into Type Logical Grammar, in general, the book discusses the formal properties of this connective. In the sequel, Jäger applies this machinery to numerous linguistic phenomena pertaining to the interaction of pronominal anaphora, VP ellipsis, and quantification. In the final chapter, the framework is extended to indefiniteness, specificity, and sluicing.

Questions Veneeta Dayal, 2016. This book synthesizes and integrates 40 years of research on the semantics of questions and its interface with pragmatics and syntax, conducted within the formal semantics tradition. A wide range of topics are covered, including weak-strong exhaustiveness, maximality, functional answers, single-multiple trapped list answers, embedding, predicates, quantificational variability, concealed questions, weak islands, polar and alternative questions, negative polarity, and non-canonical questions. The literature on this rich set of topics, theoretically diverse and scattered across multiple venues, is often hard to assimilate. Veneeta Dayal, drawing on her own research, brings them together for the first time in a coherent, concise, and well-structured whole. Each chapter begins with a non-technical introduction to the issues discussed; semantically sophisticated accounts are then presented incrementally, with the major points summarized at the end of each section. Written in an accessible style, this book provides both a guide to one of the most vibrant areas of research in natural language and an account of how this area of study is developing. It will be a unique resource for the novice and expert alike and seeks to appeal to a variety of readers without compromising depth and breadth of coverage.
