Bavoux,2016-03-02 On n'a jamais autant parlé de géographie. Mais si elle a beaucoup dit sur la mondialisation l'aménagement des territoires les changements climatiques l'emprise du cyberspace l'explosion de la mobilité ou les tensions internationales elle reste cependant une science méconnue. Cet ouvrage vient combler ce manque. En montrant la richesse des approches géographiques et le dynamisme de leurs tendances les plus actuelles, cette nouvelle édition entièrement remaniée et enrichie présente l'ensemble des méthodes bouleversées par les évolutions de la cartographie géographique SIG, l'essor de l'informatique et la géographie webmapping, globes virtuels et la prise en compte nouvelle des représentations et comportements spatiaux. Elle s'interroge sur les objectifs de la géographie et son utilité dans la société, étudiant en profondeur la manière dont elle est enseignée et ses rapports avec la politique l'écologie l'économie ou la culture. Un manuel à l'attention de tous les étudiants en géographie des enseignants qui s'interrogent sur les métamorphoses de leur discipline et de tous ceux qui dans leur vie professionnelle ou leur vie tout court ont rapport avec les dimensions spatiales et territoriales. *La modélisation en*

géographie Denise Pumain,2020-03-01 La modélisation des villes et des territoires a beaucoup progressé depuis 20 ans grâce aux systèmes d'information géographique, la mise à disposition sur Internet de grandes masses de données géolocalisées et la montée en performance des méthodes informatiques pour la simulation et l'exploration des modèles dynamiques. La modélisation en géographie explique les différentes étapes de la construction de ces modèles depuis leurs bases conceptuelles jusqu'à leurs utilisations pratiques, permettant de mieux comprendre les formes d'organisation et les processus de l'évolution des villes et territoires. Cet ouvrage rend ainsi accessibles les fondements théoriques de la construction et les délicates opérations de la sélection d'un modèle, les applications des fractales et des lois d'échelle, la connaissance de la morphologie des villes et l'organisation des transports urbains. Il présente en détail des méthodes inédites de construction et d'exploration des modèles et de visualisation des données et des résultats. *Regional Airports* M. N. Postorino,2011

Regional Airports have become increasingly important elements of the air network system both as feeders of hub and spoke services and as origins or destination of point to point services. Congestion at the main hubs and increasing demand for air transportation both for passengers and freight services necessitates revaluation of the overall air systems with regional airports taking an ever expanding role. Optimisation of air transportation systems within the framework of other forms of transport plays an important part in the present quest for sustainability. Congestion nowadays is not only associated with countries such as the USA and those in the EU but also a variety of other countries with fast developing economies where there is a strong increase in air transportation demand. The revolution of the existing airport system including regional airports requires the developing of new optimisation tools which can simulate the whole process and produce optimal solutions. These models are also essential to predict future demands and in particular the role that regional airports will play. The siting of new airports involves taking into consideration a variety of environmental, ecological, social and economic factors which transcend the problem of transportation resources optimisation itself. Regional Airports can be a powerful driving force behind the

development of an area and conversely can result in major problems if they are wrongly sited **Horizons géographiques**
